

## 2. HOW TO COMPOST

- 1** **Select a dry, shady spot near a water source.**  
Ideal size for your compost area is 3 feet wide by 3 feet deep by 3 feet tall. You can buy a bin, use chicken wire, or just isolate an area of ground for your compost heap.

- 2** **Add brown and green material in alternate layers.**  
Try and keep the ratio roughly 3 parts browns to 1 part greens. Make sure larger pieces of material are chopped or shredded.

- 3** **Keep the compost moist [but not too wet].**  
Moisture helps with the breakdown of organic matter.

- 4** **Occasionally turn your compost mixture to provide aeration.**  
This helps speed up the composting process and keeps things airy, which cuts the risk of things getting smelly.

- 5** **As materials breakdown, the pile will get warm.**  
There might even be steam. Don't be alarmed. That means it's working. Now you just have to wait.

- 6** **All done!**  
When material is dark with no remnants of food or waste, your compost is ready. Add it to lawns and gardens or anywhere that could benefit from some good soil.
