Semantic Networks An Evidential Formalization And Its Connectionist Realization:

   Semantic Networks Lokendra Shastri,1988 Shastri s book describes how a high level specification of hierarchically structured knowledge about concepts and their properties may be encoded as a massively parallel network of a simple processing elements The evidential formalization of semantic networks leads to a principled treatment of exceptions multiple inheritance and conflicting information during inheritance and the best match or partial match computation during recognition This formalization offers semantically justifiable solutions to a larger class of problems than existing formulations e g default logic The network operates without the intervention of a central controller or interpreter The knowledge as well as mechanisms for drawing limited inferences on it are encoded within the network It uses controlled spreading activation to solve inheritance and recognition problems in time proportional to the depth of the conceptual hierarchy independent of the total number of concepts in the conceptual structure The number of nodes in the connectionist network is at most quadratic in the number of concepts The book has six chapters and one appendix After the introduction in chapter 1 semantic networks their properties and formalizations are discussed in chapter 2 Especially the significance of inheritance and recognition and the evidential approach to it is pointed out here Chapter 3 specifies a knowledge representation language The problems of inheritance and recognition are reformulated in this language In chapter 4 the evidential formalization and its application to inheritance and recognition are demonstrated Section 4 1 derives an evidence combination rule In the following two sections this rule is compared to the DEMPSTER SHAFER evidence combination rule section 4 2 and to the BAYES rule for computing conditional probabilities The next two sections develop solutions to evidential inheritance section 4 4 and evidential recognition section 4 5 together with constraints for a conceptual structure The connectionist realization of the memory network is developed in chapter 5 First the need for parallelism is discussed section 5 1 then the connectionist model section 5 2 and other massively parallel models of semantic memory section 5 3 are reviewed The connectionist encoding of the high level specification is described in section 5 4 together with the connectivity and computational characteristics of node types This is followed by examples of network encoding section 5 5 and the elaboration of some implementation details section 5 6 In section 5 7 and appendix A there is a proof that the proposed network solves the inheritance and recognition problem in accordance with the evidential formulation and in time proportional to the depth of the conceptual hierarchy Section 5 8 describes the simulation of the proposed system on a conventional computer together with simulation runs of test examples often cited as being problematic The book ends with a general discussion chapter 6   **Konnektionismus** Georg Dorffner,2013-04-17   <u>Strategische Frühaufklärung</u> Franz Liebl,2018-12-17 Das Werk versucht neue Konzepte der Informations und Wissensverarbeitung zu nutzen um damit unerschlossene Potentiale der strategischen Fr haufkl rung zu realisieren   **Wissensrepräsentation und Inferenz** Wolfgang Bibel,Steffen Hölldobler,Torsten Schaub,2013-03-08 Das Gebiet der Wissenspr sentation und Inferenz umfa t einen zentralen Bereich der Intellektik d h des Gebietes der K nstlichen
