

## Bumper-to-Bumper Warranty vs. Powertrain Warranty

### Bumper-to-Bumper Warranty

- Covers everything except a small list of car parts in the contract
- Better for vehicles less than 10 years old and with less than 100K miles
- Often the most expensive type of warranty

### Both

- Cover repairs to vehicles after mechanical breakdowns
- Typically offered in manufacturer warranties
- Offered by many independent warranty providers
- Usually come with roadside services like tows and jump-starts

### Powertrain Warranty

- Only covers specific parts in the contract, like the:
  - Engine
  - Transmission
  - Drive axle
  - Transfer case
- Better for older vehicles with longer mileages
- One of the least expensive warranty options

introduction to Pearl's causal concepts such as structural causal models, interventions, counterfactuals, and more. Each concept is accompanied by a theoretical explanation and a set of practical exercises with Python code. Next, you'll dive into the world of causal effect estimation, consistently progressing towards modern machine learning methods. Step by step, you'll discover Python's causal ecosystem and harness the power of cutting-edge algorithms. You'll further explore the mechanics of how causes leave traces and compare the main families of causal discovery algorithms. The final chapter gives you a broad outlook into the future of causal AI, where we examine challenges and opportunities and provide you with a comprehensive list of resources to learn more. By the end of this book, you will be able to build your own models for causal inference and discovery using statistical and machine learning techniques as well as perform basic project assessment. What you will learn: Master the fundamental concepts of causal inference. Decipher the mysteries of structural causal models. Unleash the power of the 4-step causal inference process in Python. Explore advanced uplift modeling techniques. Unlock the secrets of modern causal discovery using Python. Use causal inference for social impact and community benefit. Who this book is for: This book is for machine learning engineers, researchers, and data scientists looking to extend their toolkit and explore causal machine learning. It will also help people who've worked with causality using other programming languages and now want to switch to Python, those who worked with traditional causal inference and want to learn about causal machine learning, and tech-savvy entrepreneurs who want to go beyond the limitations of traditional ML. You are expected to have basic knowledge of Python and Python scientific libraries along with knowledge of basic probability and statistics.
