Philosophical Problems Of Psychology:

Philosophical Problems of Psychology Edward H. Madden, 1973 **Philosophical Problems in Psychology** Neil Bolton, 2025-04-01 Philosophical psychology reflects upon the aims and the concepts of empirical psychology First published in 1979 *Philosophical Problems in Psychology* argues that empirical psychology must be founded upon the language of rationality for actions and the reasons people give for their actions are at the heart of human behaviour This thesis is defended in the contributions to Part I which assert that psychology must take the form of an elaboration of common sense But the authors in Part II maintain that psychology may remain faithful to this insight whilst still developing more sophisticated models of behaviour The use of computer models Piaget's views on the effects of internalization and a discussion of the geometry of phenomenal space provide illustrations Part III contains three papers which explore the limitations of theoretical statements which emphasize our construction of reality The pertinence of the computer analogy is disputed subject centred models are scrutinized in the light of phenomenology and the role of theory in psychotherapy is critically discussed *Philosophical Problems in Psychology* Neil Bolton, 1979 *Problems of Philosophy and Psychology* Jay N. On More Elementary Philosophical Problems of Psychology Jay N. Eacker, 1974 World Views and Scientific Discipline Formation W.R. Woodward, Robert S. Cohen, 1991-10-31 The various efforts to develop a Marxist philosophy of science in the one time socialist countries were casualties of the Cold War Even those who were in no way Marxists and those who were undogmatic in their Marxisms now confront a new world All the more harsh is it for those who worked within the framework imposed upon professional philosophy by the official ideology Here in this book we are concerned with some 31 colleagues from the late German Democratic Republic representative in their scholarship of the achievements of a curiously creative while dismayingly repressive period The literature published in the GDR was blossoming certainly in the final decade but it developed within a totalitarian regime where personal careers either advanced or faltered through the private protection or denunciation of mentors We will never know how many good minds did not enter the field of philosophy in the first place due to their prudent judgments that there was a virtual requirement that the candidate join the Socialist Unity i.e. Communist Party Among those who started careers and were sidetracked the record is now beginning to be revealed and for the rest the price of doing philosophy was mostly silence in the face of harassments the likes of which make academic politics in the West seem child's play **S. L. Rubinštejn and the Philosophical Foundations of Soviet Psychology** T.R.S.L.

Payne, 2012-12-06 This work is intended as an introduction to the study of Soviet psychology In it we have tried to present the main lines of Soviet psychological theory in particular the philosophical principles on which that theory is founded There are surprisingly few books in English on Soviet psychology or indeed in any Western European language The works that exist usually take the form of symposia or are collections of articles translated from Soviet periodicals The most important of these

are Psychology in the Soviet Union ed by Brian Simon Recent Soviet Psychology ed by Neil O Connor and Soviet Psychology A Symposium ed by Ralf Winn Raymond Bauer has also edited an interesting symposium entitled Some Views on Soviet Psychology Only two systematic studies of Soviet psychology have been published to date Joseph Wortis Soviet Psychiatry and Raymond Bauer s The New Man in Soviet Psychology Both are valuable introductions to Soviet psychology Bauer s book in particular gives a good account of the debates on psychological theory in the Soviet Union in the nineteen twenties and thirties Both however are somewhat out of date There are also a number of interesting articles written by Ivan D London and Gregory Razran which give general surveys of particular periods or aspects of Soviet psychology These have been listed in the bibliography

Philosophical Dimensions of Personal Construct Psychology Bill Warren, 2002-09-11 This book traces the philosophical history of Personal Construct Psychology through the broad and complex tradition of phenomenology and thinkers such as Spinoza Hegel and Heidegger The author also gives credit to the influence of general creative and dramatic literature across a variety of cultures Specific issues addressed in depth include the position of Personal Construct Psychology with regard to philosophy of science determinism and free will concepts of mental illness and the implications for social and political philosophy

The Philosophy of Psychology William O'Donohue, Richard F Kitchener, 1996-10-30 This major text provides the first comprehensive anthology of the key topics arising in the philosophy of psychology Bringing together internationally renowned authors including Herb Simon Karl Pribram Joseph Rychlak Ullin T Place and Adolf Grünbaum this volume offers a stimulating and informative addition to contemporary debate With the cognitive revolution of the 1960s there has been a resurgence of interest in the study of the philosophical assumptions and implications of psychology Several significant themes such as the foundations of knowledge behaviourism rationality emotion and cognitive science span both philosophy and psychology and are covered here along with a wide range of issues in the fields of folk psychology clinical psychology neuropsychology and professional ethics

Psychology as Philosophy, Philosophy as Psychology: Articles and Reviews 2006-2019 Michael Starks, 2019-09-27 Since philosophical problems are the result of our innate psychology or as Wittgenstein put it due to the lack of perspicuity of language they run throughout human discourse and behavior so there is endless need for philosophical analysis not only in the human sciences of philosophy sociology anthropology political science psychology history literature religion etc but in the hard sciences of physics mathematics and biology It is universal to mix the language game questions with the real scientific ones as to what the empirical facts are Scientism is ever present and Wittgenstein arguably the greatest intuitive psychologist of all time has laid it before us long ago beginning with the Blue and Brown Books in the early 1930 s Language is programmed in our genes and is involved in nearly all our social behavior Philosophy in the strict sense i e academic philosophy is as Wittgenstein showed us the study of the way language is used language games and I regard it as the descriptive psychology of higher order thought i e pretty much everything involving language which is often called System 2 or slow thinking However as I hope I have shown in my

writings over the last decade nonlinguistic behavior or System 1 or fast thinking is also described with language and this leads to endless confusion which I have tried to clarify here and which is summarized in the tables that I present It is my contention that the table of intentionality rationality mind thought language personality etc that features prominently here describes more or less accurately or at least serves as an heuristic for how we think and behave and so it encompasses not merely philosophy and psychology but everything else history literature mathematics politics etc Note especially that intentionality and rationality as I along with Searle Wittgenstein and others view it includes both conscious deliberative linguistic System 2 and unconscious automated prelinguistic System 1 actions or reflexes I provide a critical survey of some of the major findings of two of the most eminent students of behavior of modern times Ludwig Wittgenstein and John Searle on the logical structure of intentionality mind language behavior taking as my starting point Wittgenstein s fundamental discovery that all truly philosophical problems are the same confusions about how to use language in a particular context and so all solutions are the same looking at how language can be used in the context at issue so that its truth conditions Conditions of Satisfaction or COS are clear The basic problem is that one can say anything but one cannot mean state clear COS for any arbitrary utterance and meaning is only possible in a very specific context I analyze various writings by and about them from the modern perspective of the two systems of thought popularized as thinking fast thinking slow employing a new table of intentionality and new dual systems nomenclature I show that this is a powerful heuristic for describing behavior with critical reviews of the writings of a wide variety of behavioral scientists i e everyone The first group of articles attempt to give some insight into how we behave that is reasonably free of theoretical delusions In the next three groups I comment on three of the principal delusions preventing a sustainable world technology religion and politics cooperative groups People believe that society can be saved by them so I provide some suggestions in the rest of the book as to why this is unlikely via short articles and reviews of recent books by well known writers *Philosophical Problems of Psychology* ,2014 Philosophy of Psychology: Causality and Psychological Subject Wenceslao J. Gonzalez,2018-06-11 Contemporary philosophy of science analyzes psychology as a science with special features because this discipline includes some specific philosophical problems descriptive and normative structural and dynamic Some of these are particularly relevant both theoretically casual explanation and practically the configuration of the psychological subject and its relations with psychiatry Two central aspects in this book are the role of causality especially conceived as intervention or manipulation and the characterization of the psychological subject This requires a clarification of scientific explanations in terms of causality in psychology because characterizations of causality are quite different in epistemological and ontological terms One of the most influential views is James Woodward s approach to causality as intervention which entails an analysis of its characteristics new elements and limits This means taking into account the structural and dynamic aspects included in causal cognition and psychological explanations Psychology seen as special science also requires us to consider the scientific status

of psychology and the psychological subject which leads to limits of naturalism in psychology

Human Action and Its Explanation R. Tuomela, 2012-12-06 This book presents a unified and systematic philosophical account of human actions and their explanation and it does it in the spirit of scientific realism In addition various other related topics such as psychological concept formation and the nature of mental events and states are discussed This is due to the fact that the key problems in the philosophy of psychology are interconnected to a high degree This interwovenness has affected the discussion of these problems in that often the same topic is discussed in several contexts in the book I hope the reader does not find this too frustrating The theory of action developed in this book especially in its latter half is a causalist one In a sense it can be regarded as an explication and refinement of a typical common sense view of actions and the mental episodes causally responsible for them It has of course not been possible to discuss all the relevant philosophical problems in great detail even if I have regarded it as necessary to give a brief treatment of relatively many problems Rather I have concentrated on some key issues and hope that future research will help to clarify the rest
