Smith,2005 This set covers the traditional literature on the philosophy of the social sciences and the contemporary philosophical and methodological debates developing at the heart of the disciplinary and interdisciplinary groups in the social sciences **Rationality and the Social Sciences (RLE Social Theory)** S.I. Mortimore,2014-08-21 The concepts of rationality that are used by social scientists in the formation of hypotheses models and explanations are explored in this collection of original papers by a number of distinguished philosophers and social scientists The aim of the book is to display the variety of the concepts used to show the different roles they play in theories of very different kinds over a wide range of disciplines including economics sociology psychology political science and anthropology and to assess the explanatory and predictive power that a theory can draw from such concepts **Social Science** Delanty, Gerard,2005-06-01 What is social science Does social scientific knowledge differ from other kinds of knowledge such as the natural sciences and common sense What is the relation between method and knowledge This concise and accessible book provides a critical discussion and comprehensive overview of the major philosophical debates on the methodological foundations of the social sciences From its origins in the sixteenth century when a new system of knowledge was created around the idea of modernity the author shows how the philosophy of social science developed as a reflection on some of the central questions in modernity Visions of modernity have been reflected in the self understanding of the social sciences From the positivist dispute on explanation vs understanding to controversies about standpoint to debates about constructivism and realism Delanty outlines the major shifts in the philosophy of social science He argues that social science is an intellectual framework for the transformation of the social world The new edition is updated and expanded throughout with the latest developments in the field including a new chapter on feminist standpoint epistemology and additional material on neo positivism pragmatism and reflexivity This is one of the most ambitious and wide ranging texts in recent years on debates on method and the contemporary situation of social science It is of interest to undergraduate students and postgraduates as well as to professional researchers with an interest in the philosophy of the social sciences and social theory *Philosophy and Methodology of the Social Sciences II* Mark J. Smith,2011-07 This four volume set of essays on the philosophical and methodological debates in the social sciences builds on Mark Smith s highly successful first set of essays SAGE 2005 This new set draws together classic and contemporary material on key debates such as the linguistic turn in social science reformist and transformist social science and discursive approaches to social research Volume One Language and Scientific Knowledge Volume Two Authentic Relevant and Adequate Knowledge Volume Three Transformist Social Science Feminism Critical Realism and Emancipatory Knowledge Volume Four Discursive Social Science *Epistemology, Methodology, and the Social Sciences* Robert S. Cohen,Marx W. Wartofsky,2013-03-09 The last decades

have seen major reformations in the philosophy and history of science. What has been called post positivist philosophy of science has introduced radically new concerns with historical social and valuative components of scientific thought in the natural sciences and has raised up the demons of relativism, subjectivism and sociology to haunt the once calm precincts of objectivity and realism. Though these disturbances intruded upon what had seemed to be the logically well ordered domain of the philosophy of the natural sciences, they were no news to the social sciences. There the messy business of human action, volition, decision, the considerations of practical purposes and social values, the role of ideology and the problem of rationality had long conspired to defeat logical reconstructionist programs. The attempt to tarne the social sciences to the harness of a strict hypothetico deductive model of explanation failed. Within the social sciences phenomenological Marxist hermeneuticist action theoretical approaches vied in attempting to capture the distinctiveness of human phenomena. In fact the philosophy of the natural sciences even in its hard forms has itself become infected with the increasing reflection upon the role of such social scientific categories in the attempt to understand the nature of the scientific enterprise. Praxis Mihailo

Markovic, Gajo Petrovic, 2012-12-06 This volume of the Boston Studies is a distillation of one of the most creative and important movements in contemporary social theory. The articles represent the work of the so called Praxis group in Yugoslavia, a heterogeneous movement of philosophers, sociologists, political theorists, historians and cultural critics united by a common approach that of social theory as a critical and scientific enterprise closely linked to questions of contemporary practical life. As the introductory essay explains in its history and analysis of the development of this group, the name Praxis focuses on the heart of Marx's social theory, the conception of human beings as creative, productive makers and shapers of their own history. The journal Praxis, which appeared regularly in Yugoslavia at Zagreb and also in an International Edition for many years, is the source of many of these articles. The journal had to suspend publication in 1975 because of political pressures in Yugoslavia. Eight members of the group were dismissed from their University posts in Belgrade after a long struggle in which their colleagues stood by them staunchly. Yet the creativity and productivity of the group continues by those in Belgrade and elsewhere. Its contributions to the social sciences and to the very conception of social science as critical and applied theory remain vivid, timely and innovative. The importance of the theoretical work of the Praxis group is perhaps at its height now. **Methodology and Epistemology for Social Sciences** Donald T. Campbell, 1988-10-27

Selections from the work of an influential contributor to the methodology of the social sciences. He treats measurement, experimental design, epistemology and sociology of science, each section introduced by the editor Samuel Overman. Annotation copyright Book News Inc, Portland, Or. **Methodology of the Social Sciences** Felix Kaufmann, 1978 Philosophy, Methodology and Educational Research David Bridges, Richard D. Smith, 2007-10-22 This book evaluates the increasingly wide variety of intellectual resources for research methods and methodologies and investigates what constitutes good educational research. Written by a distinguished international group of philosophers of education. Questions what sorts of research can usefully

inform policy and practice and what inferences can be drawn from different kinds of research Demonstrates the critical engagement of philosophers of education with the wider educational research community and illustrates the benefits that can accrue from such engagement *Rationality and the Social Sciences* Stanley I. Benn,G. W. Mortimore,2015 The concepts of rationality that are used by social scientists in the formation of hypotheses models and explanations are explored in this collection of original papers by a number of distinguished philosophers and social scientists The aim of the book is to display the variety of the concepts used to show the different roles they play in theories of very different kinds over a wide range of disciplines including economics sociology psychology political science and anthropology and to assess the explanatory and predictive power that a theory can draw from such concepts Philosophical Foundations of the Social Sciences Harold Kincaid,1995-11-24 This book defends the prospects for a science of society It argues that behind the diverse methods of the natural sciences lies a common core of scientific rationality that the social sciences can and sometimes do achieve It also argues that good social science must be in part about large scale social structures and processes and thus that methodological individualism is misguided These theses are supported by a detailed discussion of actual social research including theories of agrarian revolution organizational ecology social theories of depression and supply demand explanations in economics *Method in Social Science* R. Andrew Sayer,2010 In its second edition *Method in Social Science* was widely praised for its penetrating analysis of central questions in social science discourse This revised edition comes with a new preface and a full bibliography The book is intended for students and researchers familiar with social science but having little or no previous experiences of philosophical and methodological discussion and for those who are interested in realism and method **The Oxford Handbook of Philosophical Methodology** Herman Cappelen,Tamar Gendler,John P. Hawthorne,2016 This is the most comprehensive book ever published on philosophical methodology A team of thirty eight of the world s leading philosophers present original essays on various aspects of how philosophy should be and is done The first part is devoted to broad traditions and approaches to philosophical methodology including logical empiricism phenomenology and ordinary language philosophy The entries in the second part address topics in philosophical methodology such as intuitions conceptual analysis and transcendental arguments The third part of the book is devoted to essays about the interconnections between philosophy and neighbouring fields including those of mathematics psychology literature and film and neuroscience **Praxis** Gajo Petrovic,Mihailo Markovic,1979 **Method in Social Science** R. Andrew Sayer,1992 Widely praised on its first publication this second edition directly reflects new developments in the areas of philosophy and method **Principles of Methodology** Perri 6,2011-10-31 This book provides a comprehensive accessible guide to social science methodology In so doing it establishes methodology as distinct from both methods and philosophy Most existing textbooks deal with methods or sound ways of collecting and analysing data to generate findings In contrast this innovative book shows how an understanding of methodology allows us to design research so that findings can be used to answer

interesting research questions and to build and test theories Most important things in social research e.g. beliefs, institutions, interests, practices and social classes cannot be observed directly This book explains how empirical research can nevertheless be designed to make sound inferences about their nature, effects and significance The authors examine what counts as good description, explanation and interpretation and how they can be achieved by striking intelligent trade-offs between competing design virtues Coverage includes why methodology matters, what philosophical arguments show us about inference, competing virtues of good research design, purposes of theory, models and frameworks, forming researchable concepts and typologies, explaining and interpreting, inferring causation, meaning and significance and combining explanation and interpretation The book is essential reading for new researchers faced with the practical challenge of designing research Extensive examples and exercises are provided based on the authors' long experience of teaching methodology to multi-disciplinary groups Perri 6 is Professor of Social Policy in the Graduate School in the College of Business Law and Social Sciences at Nottingham Trent University Chris Bellamy is Emeritus Professor of Public Administration in the Graduate School Nottingham Trent University Social Philosophy of Science for the Social Sciences Jaan Valsiner, 2019-12-11 This is an international and interdisciplinary volume that provides a new look at the general background of the social sciences from a philosophical perspective and provides directions for methodology It seeks to overcome the limitations of the traditional treatises of a philosophy of science rooted in the physical sciences as well as extend the coverage of basic science to intentional and socially normative features of the social sciences The discussions included in this book are divided into four thematic sections: Social and cognitive roots for reflexivity upon the research process; Philosophies of explanation in the social sciences; Social normativity in social sciences; Social processes in particular sciences Social Philosophy of Science for the Social Sciences will find an interested audience in students of the philosophy of science and social sciences It is also relevant for researchers and students in the fields of psychology, sociology, economics, anthropology, education and political science
