Microchemical Analysis of Nervous Tissue Neville N. Osborne, 1963-10-22 Microchemical Analysis of Nervous Tissue focuses on the use of microbiochemical methods in the analysis of nervous tissue with emphasis on those related to the study of amines amino acids phospholipids and proteins Special attention is paid to the choice of biological material and the various procedures used for the isolation by dissection of defined components of the nervous system Comprised of 10 chapters this volume begins with an overview of microprocedures used in neurochemistry followed by a discussion on the importance of choosing the biological material for microanalysis The isolation of nervous tissue for analysis is then considered with particular reference to invertebrate neurons cell components from fresh fixed freeze dried and frozen impregnated tissue and discrete areas of nervous tissue Subsequent chapters describe some instruments and glassware used in microprocedures along with the applications of such procedures general techniques used in microprocedures microdetermination of phospholipids as well as amines and amino acids as dansyl derivatives and microelectrophoresis of proteins This book will be of interest to molecular biologists microbiologists physiologists and neurochemists

**Function and Metabolism of Phospholipids in the Central and Peripheral Nervous Systems** Giuseppe Porcellati, 1975-03-09 The present volume contains all the contributions and general discussion presented at the International Satellite Meeting on Function and Metabolism of Phospholipids in Central and Peripheral Nervous Systems held at Cortona Tuscany Italy in August 1975 The Satellite Meeting was organized on the frame of the 5th International Congress of the International Society for Neurochemistry Barcelona 27 september 1975 and was just run before it The publication of the scientific content of this volume has been made possible by the collaboration of the speakers the discussants the Meeting Chairman the section chairmen and of all the scientists who have taken part at the Symposium and who deeply and actively discussed the lectures and the contributions to the General Discussion which were delivered In

order to obtain rapid publication of the volume however the single discussions for each delivered contribution will not be reported here The general subject of membrane structure of the turnover of its lipid components in CNS and PNS their functional implications and pharmacological actions was explored in details from the stand points of the various contributors in biophysics biochemistry physiology cytology pharmacology and pathology The whole Symposium was efficiently introduced and closed by Dr W Stoffel The meeting has been thought to have been very successful **Brain Development** Jacqueline Jumpsen, Michael T. Schettler, H. Greten, G. Schlierf, D. Seidel, 1976-12-22 Probleme des Lipidstoffwechsels berühren zahlreiche Bereiche der ärztlichen Tätigkeit in Praxis und Klinik Hyperlipidämien sind die häufigsten Stoffwechselstörungen geworden als Risikofaktor arteriosklerotischer Erkrankungen sind sie mitverantwortlich für die häufigste Todesursache den Herzinfarkt Der vorliegende Handbuchband spiegelt die Fortschritte unserer Kenntnis über den normalen und gestörten Fettstoffwechsel wider 38 internationale Autoren behandeln die physiologischen und pathophysiologischen Grundlagen der Lipide und Lipoproteine primäre und sekundäre Hyperlipoproteinämien Hypolipoproteinämien und Lipidosen Die Darstellung der Hyperlipoproteinämien berücksichtigt die Fortschritte der Lipoproteinforschung und die Einteilung wie sie von Fredrickson

und Mitarbeitern vorgeschlagen und von einem Ausschuß der WHO als Vorschlag einer gemeinsamen Sprache auf diesem Gebiet unterstützt wurde. Dabei sind sich Autoren und Herausgeber darüber im klaren, daß eine derartige Darstellung zum Teil noch vorwiegend deskriptiv ist und ein und dasselbe Lipoproteinmuster sowohl bei verschiedenen genetischen Störungen des Lipidstoffwechsels als auch bei sekundären Hyperlipoproteinemien beobachtet werden kann. Das Einteilungssystem muß daher so lange flexibel bleiben, bis eine Klassifizierung, die auf der Pathogenese dieser klinisch wichtigen Stoffwechselstörung beruht, möglich ist. Die jüngsten Fortschritte der Forschung auf diesem Gebiet haben bereits zu konkreten Ergebnissen geführt und lassen neue Ansätze erkennen. Ein Vergleich der vorliegenden Darstellung der verschiedenen Lipidosen mit den entsprechenden Kapiteln im Handbuch von 1955 zeigt, daß hier die Aufklärung der Ätiologie weitgehend abgeschlossen ist und verschiedene Störungen des enzymatischen Abbaus dieser komplexen Lipide bereits in utero nachgewiesen werden können.
