Phylogenesis Of Immune Functions:

Phylogenesis of Immune Functions Gregory W. Warr, Nicholas Cohen, 2024-12-20 This volume discusses recent advances in research regarding the evolution of specific and nonspecific defense responses in a taxonomically diverse array of species Topics regarding invertebrates include the protective mechanisms cellular and molecular employed by insects the protective roles of lectins and the self nonself discrimination revealed by tissue incompatibility reactions With vertebrates the evolution of the immunoglobulin related superfamily of recognition molecules including immunoglobulins and the major histocompatibility complex molecules is examined over several chapters Other topics reviewed include the evolution of nonimmunoglobulin mediators of defense e g cytokines and eicosanoids lymphocyte subpopulations including effects of ambient temperature on function and the phylogenetic emergence of natural killer cells Phylogenesis of Immune Functions provides invaluable information for evolutionary biologists as well as all immunologists and other researchers interested in discovering how inhabitants in our increasingly threatened biosphere protect themselves against environmental pathogens and toxins

Phylogenesis of Immune Functions Gregory W. Tierärztliche Praxis ,1996 The Primordial VRM System and the Evolution of Vertebrate Immunity John Stewart, 1994 This book discusses the evolutionary origin of immunoglobulins and T cell receptors The complex interactions between B and T cells in response to external antigens are the major focus of contemporary immunology This book argues that these interactions may be relatively late evolutionary developments due to the redeployment of a system invented for other reasons In other words immunoglobulins did not arise in evolution to fight infection The author theorizes that the system of variable region moleculars VRM arose at the time of the first vertebrates by an endogenous self organizing process This primordial VRM system instituted a molecular ecology a function so vital that from then on no vertebrate has been able to do without it *Immunology Methods Manual: Immunodiagnosis of human B cell malignancies* Ivan Lefkovits, 1997 **Invertebrate Immune Responses** P.B. Armstrong, 1996-03-04 E L Cooper In

Volume 23 we considered in seven chapters the basic armamentarium of the invertebrate immune system and its cells as well as an analysis of antigens setting the stage for the initiation of an immune response We studied cell products natural or induced as revealed by nonspecific and specific responses following antigenic challenge such as the pro phenol oxidase system the lytic responses the Ig superfamily and the place this family offers invertebrates and insect hemolymph proteins as candidates for membership At this point these various topics seemed to converge almost to overlap in some instances presenting a challenge as to how to move from one subject to another Chapter 1 in this volume offers the bridge to Volume 23 and its final Chapter 7 This Volume 24 contains contributions pertaining to cell activities and the environment Chapters 1 4 refer specifically to interactions between cells and the integration of cell activities The focus is on a functional immune system with antigenic challenge as a subtopic In Chapters 5 7 the environment is considered from several points of view and the main subtopic here is the result of the consequences of connections and missed signals The internal and external environments are treated revealing what may happen when normal immune responses are interfered with All this is integrated by the consideration of the three great regulatory systems the ever present network that somehow acts as the monitor or control for all incoming and outgoing signals *The Effects of Major Histocompatibility Complex Dosage on Chicken Macrophage Function* Hsueh-Kung Lin,1992 *Phylogenetic Perspectives in Immunity* Jules Hoffmann,1994

Primordial Immunity Gregory Beck,1994 Primitive species are capable of recognition and defence thus lessons learned from them can provide a basis for understanding strategies that vertebrate animals have adopted The papers in this volume explore the mechanisms of multicellular organisms used to distinguish between self and non self in response to parasitism or infection Studies of these mechanisms used by primitive species for their defences have extensive implications for understanding the evolution of immunity and problems of human health and disease **The Journal of Experimental Biology** ,1998 **The Cytokine Handbook** Angus W. Thomson,1994 This Second Edition of The Cytokine Handbook contains new chapters on recently characterized cytokines not previously covered in the First Edition The text continues to expand the coverage of specific cytokines serving as a valuable resource tool for immunologists pathologists and cancer cell biologists *Parasitic Diseases of Fish* A. W. Pike,J. W. Lewis,1994 **Encyclopedia of Immunology** Peter J. Delves,Ivan Maurice Roitt,1998 The Encyclopedia is a source of immunological knowledge to immunologists microbiologists clinicians medical and science students *Immunology* Ivan Maurice Roitt,Jonathan Brostoff,David K. Male,1998 This classic and concise text describes immunologic mechanisms and their purpose importance while illustrations display complex structures processes and interactions Exceptional full color artwork chapter objectives summary headings critical thinking questions and updated references citing current literature continue to keep the book out front in a constantly advancing discipline Neuroendocrine immunology and nutrition and immunity are among the new topics covered and there is significantly increased coverage of AIDS *The Journal of Immunology* ,1996-06 **Advances in Avian Immunology Research** T.

Fred Davison, Nat Bumstead, Pete Kaiser, 1995 **Developmental Immunology** Edwin Lowell Cooper, Eric Nisbet-Brown, 1993 This timely comprehensive volume draws on recent advances in molecular cellular and organismal biology to provide a detailed analysis of the phylogeny and ontogeny of the immune system This first book to provide broad coverage of this field gives a clear description of cellular and molecular interactions in the development of immune function Although most of this work is based on studies in vertebrates the intriguing observations of cytokine like molecules in invertebrates are discussed In a final section the contributors deal with abnormalities in the development and regulation of the immune system including primary immunodeficiency diseases and with the normal aging of the immune system Throughout the book an effort has been made to compare and integrate information from studies in diverse systems and to discuss the limitations of such comparisons This work will be of special interest to immunologists and theoretical cell and developmental biologists and much of the book will be useful to physicians working in pediatrics internal medicine and reproductive medicine **Bibliography of Agriculture** , 1993 *Colloquium der Gesellschaft für Biologische Chemie* Gesellschaft für Biologische Chemie, 1976 **Biology of Farmed Fish** Kenneth D. Black, A. D. Pickering, 1998 The volume ends with a non generic chapter which describes the biology of key warm water species and examines many of the issues raised in earlier chapters in the context of a rapidly expanding industry This is a book for researchers postgraduate students and professionals working on any aspect of fish biology or aquaculture
