With many of the topics not previously covered in the first volume, the two books are complementary to one another and provide any veterinarian with an interest in avian medicine, whether novice or expert, the latest advances in internal medicine, anesthesia, analgesia, and surgery. Sections dedicated to behavior and welfare, neonatology, and pediatrics, conservation, and practice management explore important but less commonly discussed aspects of avian practice. With contributions from globally recognized experts on avian medicine, this is a must-have resource for anyone seeking to enhance and expand their expertise and skills in avian healthcare, welfare, and conservation. With the exception of updates on relevant current topics, the information presented in this volume predominantly includes material not previously covered in the first volume. The many photographs, illustrations, and comprehensive tables included in this volume visually highlight key concepts of current avian practice standards. Sections on pediatrics, falconry, toucans, and hornbills feature specific topics which are less comprehensively included in most references. Focused sections on the respiratory system, the beak and skull, feathers, and feet offer detailed information on these particular anatomical regions. Pharmacologic intervention and options are explored in depth to allow for clinicians to gain an optimal understanding of how to best develop treatment plans for their patients. NEW!
