Tesla Model Update Buy Online:

Der Ludicrous-Modus Edward Niedermeyer, 2020-11-08 Hinter dem Hype um den E-Auto-Pionier Tesla und seinen schillernden CEO Elon Musk scheint ungebrochen. Mit seinen innovativen Elektrofahrzeugen erschütterte Musk die Autoindustrie in ihren Grundfesten und erobert den Markt für alternative Antriebe. Während die Märkte weltweit von der Corona-Krise gebeutelt werden, trotztes Tesla dem Abwärtstrend und verkauft mehr Autos als erwartet. Doch der Automobilexperte Edward Niedermeyer weiß um die Diskrepanz zwischen Kult und alltäglichen Realitäten des Unternehmens. So weisen die Fahrzeuge teils ernsthafte Verarbeitungsmängel auf und Serviceprobleme lassen Zweifel an der hohen Marktbewertung aufkommen. In seinem Buch verbindet er bisher unveröffentlichte Insiderberichte mit fundierter Branchenanalyse und erzählt die Geschichte von Tesla wie sie bisher noch nicht erzählt wurde. Nach meiner persönlichen Desillusionierung über Tesla begann ich in der Vergangenheit und Gegenwart des Unternehmens zu wühlen. Je mehr Fragen ich stellte, desto mehr Belege fand ich für den Verdacht, dass Teslas populäres Image eine bewusst konstruierte Fassade war, die tieferliegende Funktionsstörungen kaschieren sollte. Aus der Einführung

Ludicrous Edward Niedermeyer, 2019-08-20 Tesla is the most exciting car company in a generation but can it live up to the hype? Tesla Motors and CEO Elon Musk have become household names shaking up the staid auto industry by creating a set of innovative electric vehicles that have wowed the marketplace and defied conventional wisdom. The company's market valuation now rivals that of long established automakers and to many industry observers Tesla is defining the future of the industry. But behind the hype Tesla has some serious deficiencies that raise questions about its sky-high valuation and even its ultimate survival. Tesla's commitment to innovation has led it to reject the careful zero defects approach of other car manufacturers even as it struggles to mass produce cars reliably and with minimal defects. While most car manufacturers struggle with the razor-thin margins of mid-priced sedans, Tesla's strategy requires that the Model 3 finally bring it to profitability even as the high-priced Roadster and Model S both lost money. And Tesla's approach of continually focusing on the future even as commitments and deadlines are repeatedly missed may ultimately test the patience of all but its most devoted fans. In Ludicrous journalist and auto industry analyst Edward Niedermeyer lays bare the disconnect between the popular perception of Tesla and the day-to-day realities of the company and the cars it produces. Blending original reporting and never before published insider accounts with savvy industry analysis, Niedermeyer tells the story of Tesla as it's never been told before with clear eyes, objectivity and insight.

An Electric Vehicle Conversion Start-Up: Development of a Business Model Approach Fabian

Hoeft, 2019-10-24 Master's Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1.3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today's world of mobility is characterised by a high degree of dynamism and change is becoming apparent. Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany. The share of electric vehicles is still well below one per cent. Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder. One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars. Car electrification is a solution for converting cars with conventional combustion engines to electric drives. In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars. A comprehensive concept of a business model approach from a start-up perspective has been developed based on the analysis of the environment industry and customer needs. Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars. Besides the small scale of implementation the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability. The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach. A high openness to purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion. The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight. The business model approach developed based on the findings obtained differs fundamentally from the strategies of today's providers. By incorporating the existing infrastructure of workshops and service points proximity to the end customer and scalability of the business operation can be achieved. Partnering with universities and industry are two critical elements in the development of a sustainable secure and user friendly technical solution.
