

New Owl Species Discovered!

Did you know...?

- Owls are not able to fully rotate their heads. However, they can rotate it by an impressive 270 degrees!
- The world's smallest owl is known as an elf owl. It is only around 13cm tall.
- A group of owls is known as a parliament.

Scientists have discovered a new owl species. The owl has been named *Príncipe imperator*.

This is named after the island that it was discovered on. Príncipe is only a small island measuring around 117 square kilometres and is off the west coast of Africa.

The discovery was made by a group of scientists led by Martin Hall. He said: "The discovery of a new species of bird is always an occasion for celebration".

The bird also has a Latin name – *Príncipe imperator*. (This is the name of a group of small owls who share a common evolution also known as *imperator*).

Although a named after a local ruler who shared his knowledge of these mysterious owls because he was also trying to find out more about the creature.

The discovery was made possible by following the owl's unique call. Hall said that the owl made "a short 'tut' note repeated about once a second, which may resemble the call of insects. It is often broadcast in a line, right after nightfall."

The discovery of the owl was made back in 2016. However, Príncipe birds suggest they were first discovered back in 1918.

After the discovery was made, scientists *discovered* the island to see how many of the owls

lived there.

It turned out that the owls could only be located in a 10 square kilometre section of woodland in the south of the island. That's around four times bigger than Central Park in New York.

In this small area, scientists estimate that there were around 1000-1500 birds. The scientists suggest that they should be classified as critically *endangered*. This is the highest threat level on the IUCN Red List.

The team is now going to continue to monitor the birds to help make sure they are protected.

Has Cleopatra's Tomb Been Found?

Did You Know...?

- Although known only as Cleopatra, she was actually Cleopatra VII.
- She wasn't Egyptian, she was Greek. When Alexander the Great conquered Egypt 330 years earlier, he left his Greek general, Ptolemy, in charge. Many years later, Egypt was still being ruled by his descendants. Ptolemy XII was Cleopatra's father.

Illustration: Cleopatra

Cleopatra is arguably the most famous of all the pharaohs. Yet, where she was laid to rest has remained a mystery for nearly two thousand years.

However, *archaeologists* think they may have found the final resting place of ancient Egypt's final pharaoh.

A team led by Dr Kathleen Martinez has been working at Egypt's Museum. It's an ancient Egyptian temple on the Mediterranean coast of Egypt near the city of Alexandria.

They were only given two months to search for clues. Time was running out when they uncovered the first chambers in what turned out to be a big discovery.

Many metres below the temple, the team found a tunnel that stretched for nearly 200 metres.

They've excavated some of the tombs, some of Cleopatra and Alexander the Great. They've also found an ancient *temple* outside the temple.

It's this that makes Dr Martinez sure that there is a royal tomb nearby. She thinks it could belong to Cleopatra.

Cleopatra was born around 69 BC, and ruled for roughly 22 years from the Egyptian city of Alexandria.

When Cleopatra's father died, she became the *co-ruler* of Egypt alongside her ten-year-old brother. A few years later, he decided that he no longer wanted to rule with his sister and she was *co-ruler*.

Working with Julius Caesar, Cleopatra was able to overthrow her brother and return to power.

After Caesar's death, she worked with another powerful Roman, Mark Antony. Together they ruled Egypt until their joint rule ended in 30 BC and Egypt became part of the Roman Empire.
