Investigating Psychology John Hyman, 2016-08-05 Originally published in 1991 the essays in this volume are written by philosophers who were convinced that Wittgenstein's investigations in philosophical psychology were of direct relevance to current experimental psychology at the time Rather than reflecting on the nature of psychological theory at a high level of abstraction they examined leading theories and controversies in the experimental study of vision and of language in order to reveal the conceptual problems that they raise and the philosophical theories that have exerted an influence upon them Under the section headings Language and Behaviour and Perception and Representation the essays examine the work of Chomsky Gregory Marr Weiskrantz and others and discuss problems ranging from artificial intelligence to animal communications from blindsight to machine vision The collection aims to demonstrate that philosophical

investigations can contribute to psychological science by extirpating conceptual confusions which have been woven into the fabric of empirical research The majority of the essays had been specially commissioned and the contributors include several of the most distinguished exponents of Wittgenstein's philosophical legacy at the time Proceedings of the Aristotelian Society for the Systematic Study of Philosophy Aristotelian Society (Great Britain), 1984 List of members in each volume
