Power Autonomy Utopia New Approaches Toward Complex Systems:

Power, Autonomy, Utopia Robert Trapp, 1936 **Selbstbeobachtung Der Gesellschaft Und Die Neuen Grenzen Des Sozialen** Georg Peter, Reuss-Markus Krause, 2012-09-22 Die wissenschaftliche Diskussion ihrer Grundbegriffe hat gezeigt dass eine soziologische Theorie der Gegenwartsgesellschaft nicht mehr fachspezifisch selbstgen gsm gestaltet werden kann Ver nderte Grenzziehungen auf Seiten der Gesellschaft treffen auf neue und zu ver ndernde Grenzen auf Seiten ihrer Wissenschaft Globalisierung Mitgliedschaft und Gruppe sind in ihrer zunehmenden Dynamisierung begrifflich in einem transdisziplin ren Kontext neu zu fassen Die Beitr ge gehen diesem Forschungsproblem aus verschiedenen Perspektiven nach und werfen einen Blick auf die ver nderte sthetische Erfahrung in der gesellschaftlichen Kommunikation Aspekte der Selbstorganisation Wolfgang Niegel, Peter Molzberger, 2013-03-07 **From System Complexity to Emergent Properties** Moulay Aziz-Alaoui, Cyrille Bertelle, 2009-08-07 Emergence and complexity refer to the appearance of higher level properties and behaviours of a system that obviously comes from the collective dynamics of that system s components These properties are not directly deducible from the lower level motion of that system Emergent properties are properties of the whole that are not possessed by any of the individual parts making up that whole Such phenomena exist in various domains and can be described using complexity concepts and thematic knowledges This book highlights complexity modelling through dynamical or behavioral systems The pluridisciplinary purposes developed along the chapters are able to design links between a wide range of fundamental and applicative Sciences Developing such links instead of focusing on specific and narrow researches is characteristic of the Science of Complexity that we try to promote by this contribution **Artificial Intelligence – Eine Einführung** Johannes Retti, Wolfgang Bibel, Bruno Buchberger, Ernst Buchberger, Werner Horn, Alfred Kobsa, Ingeborg Steinacker, Robert Trapp, Harald Trost, 2019-06-12 **The Will to Predict** Eglė Rindzevičiūtė, 2023-05-15 In The Will to Predict Egl Rindzevi i t demonstrates how the logic of scientific expertise cannot be properly understood without knowing the conceptual and institutional history of scientific prediction She notes that predictions of future population economic growth environmental change and scientific and technological innovation have shaped much of twentieth and twenty first century politics and social life as well as government policies Today such predictions are more necessary than ever as the world undergoes dramatic environmental political and technological change But she asks what does it mean to predict scientifically What are the limits of scientific prediction and what are its effects on governance institutions and society Her intellectual and political history of scientific prediction takes as its example twentieth century USSR By outlining the role of prediction in a range of governmental contexts from economic and social planning to military strategy she shows that the history of scientific prediction is a transnational one part of the history of modern science and technology as well as governance Going beyond the Soviet case Rindzevi i t argues that scientific predictions are central for organizing uncertainty through the orchestration of knowledge and action Bridging the fields of political sociology organization studies and history The Will to

Predict considers what makes knowledge scientific and how such knowledge has impacted late modern governance

Towards Synergism Anthony E. Mansueto, 1995-12-12 **Towards Synergism** makes a powerful case for understanding the universe as a relational and self-organizing system. The author shows that human civilization serves as the center for the dynamic complexity of the system of our universe. The author encourages us to appreciate this vitally significant role of human civilization by arguing that human creativity, not exchange, is the motivational force for social progress. This book explores the current crisis of the human civilization project and the simultaneous crisis of market and socialist systems. The author draws explicitly on developments in the new science focusing on unified field theory, complex systems theory, post-Darwinian evolutionary biology and anthropic cosmology. Mansueto also provides broad comparative historical and comparative sociological evidence. This timely, detailed and insightful study will prove useful to natural and social scientists from many disciplines as well as philosophers and theologians, religious, political and even corporate leaders who are firmly grounded in the philosophical tradition.
