**Current Progress and Challenges in the Development of a Hepatitis C Virus Vaccine** Steven K.H. Fount, Thomas F. Baumert, 2019-01-22 More than 70 million people worldwide are infected with hepatitis C virus a major cause of liver cirrhosis liver failure and hepatocellular carcinoma world wide In the last decade this cancer has emerged as the second leading cause of cancer death and the global burden is increasing by two million new infections per year mainly due to injection drug use An effective vaccine will be the most effective means to contain the spread of this virus worldwide The articles in this Research Topic describe the progress that has been made towards a preventive vaccine and the challenges that still need to be overcome to ultimately achieve this goal *Filtration and Purification in the Biopharmaceutical Industry, Third Edition* Maik W. Jornitz, 2019-06-26 Since sterile filtration and purification steps are becoming more prevalent and critical within medicinal drug manufacturing the third edition of *Filtration and Purification in the Biopharmaceutical Industry* greatly expands its focus with extensive new material on the critical role of purification and advances in filtration science and technology It provides state of the science information on all aspects of bioprocessing including the current methods processes technologies and equipment It also covers industry standards and regulatory requirements for the pharmaceutical and biopharmaceutical industries The book is an essential comprehensive source for all involved in filtration and purification practices training and compliance It describes such technologies as viral retentive filters membrane chromatography downstream processing cell harvesting and sterile filtration Features Addresses recent biotechnology related processes and advanced technologies such as viral retentive filters membrane chromatography downstream processing cell harvesting and sterile filtration of medium buffer and end product Presents detailed updates on the latest FDA and EMA regulatory requirements involving filtration and purification practices as well as discussions on best practices in filter integrity testing Describes current industry quality standards and validation requirements and provides guidance for compliance not just from an end user perspective but also supplier requirement It discusses the advantages of single use process technologies and the qualification needs Sterilizing grade filtration qualification and process validation is presented in detail to gain the understanding of the regulatory needs The book has been compiled by highly experienced contributors in the field of pharmaceutical and biopharmaceutical processing Each specific topic has been thoroughly examined by a subject matter expert

**New-generation vaccines and novel vaccinal strategies against infectious diseases of livestock, wild and companion animals** Denis Archambault, Raul Manzano Roman, Suresh Kumar Tikoo, Christophe Chevalier, Brad Pickering, 2023-08-25 Emerging and re emerging infections in particular those caused by viruses are expected to rise in correlation among other factors with climate changes Antibiotic resistance is another issue that will limit the therapeutic arsenal against bacterial and parasitic infections Therefore one must be adequately prepared to overcome and prevent current and novel infections and vaccination remains the optimal way to fight infectious diseases in humans This is

also true for many impacting diseases of livestock and companion animals to which there are no available vaccines First attenuated and inactivated and second subunit generation vaccines have their limitations To overcome this efforts have been made in recent years to develop novel vaccine types such as virus like particle VLP viral vector and DNA based vaccines in humans and animals The recent success in utilizing RNA technology based vaccines to fight SARS CoV 2 to limit the severity of clinical symptoms and mortality constitutes a promising way to develop such vaccines against animal diseases

Development of novel molecules or materials with adjuvant or immunostimulatory activity to adequately stimulate the innate immune response and therefore the pathogen specific adaptive immune response as well as the identification of suitable antigenic material that would bring broad protection against infectious agent variants are other key issues to be considered in developing safe and innovative immunization strategies

### **DNA Vaccination/Genetic Vaccination Hilary**

Koprowski, David B. Weiner, 2012-12-06 Genetic DNA immunization represents a novel approach to vaccine and immune therapeutic development The direct injection of nucleic acid expression cassettes into a living host results in a limited number of its cells becoming factories for production of the introduced gene products This host inappropriate gene expression has important immunological consequences resulting in the specific immune activation of the host against the gene delivered antigen The recent demonstration by a number of laboratories that the induced immune responses are functional in experimental models against both specific infectious diseases and cancers is likely to have dramatic consequences for the development of a new generation of experimental vaccines and immune therapies This technology has the potential to enable the production of vaccines and immune based therapies that are not only effective immunologically but are accessible to the entire world rather than just to the most developed nations Vaccine Development Vaccination against pathogenic microorganisms represents one of the most important advances in the history of medicine Vaccines including those against polio measles mumps rubella hepatitis A hepatitis B pertussis and other diseases have dramatically improved and protected more human lives than any other avenue of modern medicine The vaccine against smallpox for example has been so successful that it is now widely believed that this malicious killer responsible for more deaths in the twentieth century than World Wars I and II combined has been removed from the face of the earth
