Applied Decision Support with Soft Computing Xinghuo Yu, 2012-12-06 Soft computing has provided sophisticated methodologies for the development of intelligent decision support systems. Fast advances in soft computing technologies such as fuzzy logic and systems artificial neural networks and evolutionary computation have made available powerful problem representation and modelling paradigms and learning and optimisation mechanisms for addressing modern decision making issues. This book provides a comprehensive coverage of up to date conceptual frameworks in broadly perceived decision support systems and successful applications. Different from other existing books, this volume predominately focuses on applied decision support with soft computing. Areas covered include planning management finance and administration in both the private and public sectors. Aspiration Based Decision Support Systems Andrzej Lewandowski, Andrzej P.

Wierzbicki, 2013-11-11 It is not easy to summarize even in a volume the results of a scientific study conducted by circa 30 researchers in four different research institutions though cooperating between them and jointly with the International Institute for Applied Systems Analysis but working part time sponsored not only by IIASA's national currency funds but also by several other research grants in Poland. The aims of this cooperative study were defined broadly by its title: Theory Software and Testing Examples for Decision Support Systems. The focusing theme was the methodology of decision analysis and support related to the principle of reference point optimization developed by the editors of this volume and called also variously aspiration led decision support quasi satisfying framework of rationality DIDAS methodology etc. This focusing theme motivated extensive theoretical research from basic methodological issues of decision analysis through various results in mathematical programming in the fields of large scale and stochastic optimization nondifferentiable optimization cooperative game theory motivated and needed because of this theme through methodological issues related to software development to issues resulting from testing and applications. We could not include in this volume all papers theoretical methodological applied software manuals and documentation written during this cooperative study. **Plural Rationality and Interactive Decision Processes** M. Methodology, Implementation and Applications of Decision Support Systems A. Lewandowski, P. Serafini, M.G. Speranza, 2014-05-04 The book aims at giving the methodological framework for design decision support systems. Several applications are also described in detail ranging from environment control production planning transportation planning. The book is of special interest to operations researchers environment specialists production planners and transportation engineers. Improving Decision Making in Organisations Alan G. Lockett, Gerd Islei, 2012-12-06 McrM has been an active research area for over 20 years and the previous conferences clearly showed a tremendous growth of interest. A variety of successful applications and recent developments of interactive computer software to support decision making confirm a sustained progress. We therefore decided to make our theme Improving Decision Making in Organisations. The aim was to take

stock of the impact of multicriteria concepts in organisations and to involve management practitioners from a wide range of backgrounds To this end the conference was organised round five broad themes and papers were solicited on the following topics Psychology how do individuals in practice use and relate to the methodologies Organisation how do our models fit into the decision making framework of real organisations Application how have the models been used in practice and what is the users view Methodology what are the new areas in model development Related Areas is there complementary work eg Expert Systems which may be attempting to solve very similar problems he call for papers produced an overwhelming response of over 100 papers hey were from a variety of disciplines and applications and we decided to devote approximately one day to each of the five areas We are very impressed by the results which can be seen in this edited proceedings

Methodology and Software for Interactive Decision Support Andrzej Lewandowski,Ivan Stanchev,1989-09-06 This book presents the recent developments in methodology theory software and implementation of Decision Support Systems This includes Theory and algorithms for multiple criteria optimization with such topics dicussed like multiple criteria optimization in hierarchical systems relations between simulation and gaming for conflict resolution sensitivity and trade offs analysis in multiobjective programming Theory methodology and software for decision support systems with such topics discussed like the principles of building Decision Support Systems as well as software tools for building such systems supporting certain classes of decision problems are presented Applications of Decision Support Systems and computer implementations of decision support systems This includes experience in applying DSS for industry management bank management water system management

User-oriented Methodology and Techniques of Decision Analysis and Support Jaap Wessels,International Institute for Applied Systems Analysis,1993 This book presents selected papers from an international workshop devoted tothe theory techniques and tools of decision analysis and support Major trends in the development of this field are stressed such as the tendency to place the final user of a decision support system in the center of attention or an emerging connection between tools and software environments for modeling and for decision support The volume is acontinuation of the reports on earlier meetings which were published in the same series **Deutsche Bibliographie** ,1988 *Improving Decision Making in Organisations* A. Deutsche Nationalbibliographie und Bibliographie des im Ausland erschienenen deutschsprachigen Schrifttums, 1986 **Equity, Incentives, and Taxation** Georg Tillmann, 1989-05-10 This book deals with the problems of redistribution if different kinds of taxes are used as instruments It throws light on the equity efficiency and insurance aspects of taxation and treats the topic at a high theoretical level Using two ordinal equity criteria it is shown in the first part of the book that equity and efficiency cannot be reconciled in a general model Even if in a more restricted model equitable states exist they cannot be implemented using an income tax Part two of the book scrutinizes the range for redistribution which remains in a first best world if there is imperfect information and only special signals can be observed such as labour supply income or both The range of redistribution for these kinds of taxes is illustrated and compared In part three a situation under uncertainty where a tax works as an insurance is investigated The structure of the optimal tax scheme for several welfare functions is explored The results with respect to equity and the range of redistribution for different sorts of taxes are of particular interest The approach to the subject is not really new since standard microeconomic tools are used The book s beneficial contribution lies in its presentation of new results with respect to the equity debate and to the incentive compatibility literature

Nonlinear Dynamical Economics and Chaotic Motion Hans-Walter Lorenz, 1989 The plan to publish the present book arose while I was preparing a joint work with Gunter Gabisch Gabisch G Lorenz H W Business Cycle Theory Berlin Heidelberg New York Springer It turned out that a lot of interesting material could only be sketched in a business cycle text either because the relevance for business cycle theory was not evident or because the material required an interest in dynamical economics which laid beyond the scope of a survey text for advanced undergraduates While much of the material enclosed in this book can be found in condensed and sometimes more or less identical form in that business cycle text the present monograph attempts to present nonlinear dynamical economics in a broader context with economic examples from other fields than business cycle theory It is a pleasure for me to acknowledge the critical comments extremely detailed remarks or suggestions by many friends and colleagues The responses to earlier versions of the manuscript by W A Barnett M Boldrin W A Brock C Chiarella C Dale G Feichtinger P Flaschel D K Foley R M Goodwin D Kelsey M Lines A Medio L Montrucchio P

Read C Sayers A Schmutzler H Schnabl G Silverberg H Sinn J Sterman and R Tscherning not only encouraged me to publish the book in its present form but helped to remove numerous errors not only typographic ones and conceptual misunderstandings and flaws Particular thanks go to G The Labor Market and Business Cycle Theories Piero Ferri, Edward Greenberg, 1989 Interest in business cycles has had its ups and downs After a period of almost steady state growth and of economic tranquility when the business cycle seemed to be obsolete the turbulence of the 70s and 80s has contributed to a renewed interest in the topic Important analytical and methodological innovations have also favored the present abundance of contributions Four innovations are of particular importance i microfoundations ii nonlinearities iii stochastic variables iv real aspects Both Classical macroeconomics and new Keynesian approaches seem to share these characteristics which apply both to endogenous and exogenous explanations of the cycle The distance separating the newer literature from its forebears seems vast Previously cycle theory was characterized by a macro approach and utilized nonlinearities either through piecewise linear models or with the aid of Classical theorems in the field of dynamic systems To consider and to compare the old and the new literature on business cycles is one of the goals of this book To narrow the distance separating them is another goal of this research We do not try to bridge it but rather to revisit the former tradition with new tools Finally a particular emphasis is put on the ceilings and floors type of literature One of us has written a D Phil thesis with Sir John Hicks and both have worked with H P Minsky Hicks along with Goodwin introduced the concept of ceilings and floors into business cycle analysis and Minsky made important contributions to the area **Capacity Oriented Analysis and Design of Production Systems** M.B.M. de Koster, 1989-01-25 This book gives an analysis of capacity performance of multi stage multi product production systems Special attention is given to performance criteria like throughput average work in process and average throughput time A model is developed to represent such production systems A development of a single product continuous product flow model is given along with an analysis of the model for different layouts and different control systems Attention is given to layouts like flow lines assembly disassembly systems buffersharing networks and control systems like base stock control workload control control by finite buffers and control by reorder point systems The model and analysis techniques are applied to three different multi stage multi product case situations *Alternative Theories of Output, Unemployment, and Inflation in Germany: 1960-1985* Christine Sauer, 1989-03-08 This book is motivated by the disagreement among Monetarist Keynesian and New Classical economists about the short term determinants of output unemployment and inflation It exposes the reader to a synthesis modeling approach which allows the derivation of the opposing theories as special cases from a single general framework so that the macroeconomic controversy is reduced to tests of alternative statistical hypotheses While similar studies have been conducted for the U S economy this study is the first to consider an open economy and let the data speak about the determinants of output unemployment and inflation in Germany The analysis proceeds in two steps First the empirical

validity of commonly maintained hypotheses about the behavior of macrovariables under fixed and flexible exchange rates is assessed The results provide useful information for the specification of a structural model of the German economy Second the general macrodynamic model is specified which implies the opposing schools of thought as special cases The competing hypotheses are tested with nested regression equations to avoid the observational equivalence problem **Estimation of Dynamic Econometric Models with Errors in Variables** Jaime Terceiro Lomba, 1990
