Sex Evolution And Behavior Biology Ser:

Sex, Evolution, and Behavior Martin Daly,1978 **Sex, Evolution, and Behavior** Martin Daly,Margo Wilson,1983 This text provides an elementary level discussion of recent theory relating to the evolutionary and adaptive aspects of reproductive behaviour The relation between ultimate and proximate levels of explanation is the major theme of the book Two new chapters in this edition incorporate findings from recent research and there is also new material on humans physiology and development Sex and reproductive behaviour are examined from an evolutionary comparative perspective and numerous empirical studies and examples are cited **Sociobiology** Edward O. Wilson,2000-03-24 When this classic was first published in 1975 it created a new discipline and started a tumultuous round in the nature versus nurture debate In the introduction to this edition Wilson shows how research in human genetics and neuroscience over the past quarter of a century has strengthened the case for a biological understanding of human nature *Evolutionary Behavioral Ecology* David Westneat,Charles Fox,2010-03-05 Evolutionary Behavioral Ecology is intended to be used as a text for graduate students and a sourcebook for professional scientists seeking an understanding of the evolutionary and ecological processes shaping behavior across a wide array of organisms and a diverse set of behaviors Chapters are written by leading experts in the field providing a core foundation a history of conceptual developments and fresh insight into the controversies and themes shaping the continuing development of the field Essays on adaptation selection fitness genetics plasticity and phylogeny as they pertain to behavior place the field in the broader context of ecology and evolution These concepts along with a diversity of theoretical approaches are applied to the evolution of behavior in a many contexts from individual decision making of solitary animals through to complex social interactions Chapters integrate conceptual and theoretical approaches with recent empirical advances to understand the evolution of behavior from foraging dealing with risk predator avoidance and an array of social behaviors including fighting and cooperation with conspecifics and conflict and cooperation between the sexes The material emphasizes integrative and novel approaches to behavior including cognitive ecology personality conservation biology the links between behavior and evolution the evolution of human social behavior and ways in which modern genetic analyses can augment the study of behavior *Sex Allocation* Stuart West,2009-09-28 Recent decades have witnessed an explosion of theoretical and empirical studies of sex allocation transforming how we understand the allocation of resources to male and female reproduction in vertebrates invertebrates protozoa and plants In this landmark book Stuart West synthesizes the vast literature on sex allocation providing the conceptual framework the field has been lacking and demonstrating how sex allocation studies can shed light on broader questions in evolutionary and behavioral biology West clarifies fundamental misconceptions in the application of theory to empirical data He examines the field s successes and failures and describes the research areas where much important work is yet to be done West reveals how a shared underlying theoretical framework unites findings of sex ratio variation across a huge range of life forms from malarial

parasites and hermaphroditic worms to sex changing fish and mammals He shows how research on sex allocation has been central to many critical questions and controversies in evolutionary and behavioral biology and he argues that sex allocation research serves as a key testing ground for different theoretical approaches and can help resolve debates about social evolution parent offspring conflict genomic conflict and levels of selection Certain to become the defining book on the subject for the next generation of researchers Sex Allocation explains why the study of sex allocation provides an ideal model system for advancing our understanding of the constraints on adaptation among all living things in the natural world

Life: Outlines of General Biology John Arthur Thomson, Sir Patrick Geddes, 1931

Sex and Evolution George Christopher Williams, 1975-03-21 This book explores the relationship between various types of reproduction and the evolutionary process Starting with the concept of meiosis George C Williams states the conditions under which an organism with both sexual and asexual reproductive capacities will employ each mode He argues that in low fecundity higher organisms sexual reproduction is generally maladaptive and persists because there is no ready means of developing an asexual alternative The book then considers the evolutionary development of diverse forms of sexuality such as anisogamy hermaphroditism and the evolution of differences between males and females in reproductive strategy The final two chapters examine the effect of genetic recombination on the evolutionary process itself

Social Behavior of Female Vertebrates Samuel K. Wasser, 1983 Social Behavior of Female Vertebrates focuses on the evolution of reproductive behavior in female vertebrates ranging from fish to birds and humans including issues of mate choice and other factors underlying female attitudes toward males It also looks at the evolution of mating systems the co evolution of the sexes sex role reversal reproductive competition between females maternal behavior and how females enhance the investment received by their offspring from others It also considers other social behaviors that influence the nature of affiliative associations between females
