Seventeen Simple Lectures On General Relativity Theory:

Seventeen simple lectures on general relativity theory Hans Adolph Buchdahl, 1981 **Seventeen Simple Lectures on General Relativity Theory** H. A. Buchdahl, 1981-11-27 A self contained critical introduction to Einstein's general theory of relativity that supplements the many conventional expository works on relativity Emphasis is on clarification of underlying notions assumptions prejudices and points of semantic confusion A First Course in General Relativity Bernard Schutz, 2022-06-30 This widely used textbook explains general relativity for advanced undergraduates requiring only a minimal background in mathematics *Einsteins Theorien und Ansichten* Azarya Polikarov, **Cosmology: The Physics Of The Universe - Proceedings Of The Eighth Physics Summer School** Brian A Robson, N Visvanathan, William S Woolcock, 1996-11-27 **Evolution of Black Holes in Anti-de Sitter Spacetime and the Firewall Controversy** Yen Chin Ong, 2015-11-27 This thesis focuses on the recent firewall controversy surrounding evaporating black holes and shows that in the best understood example concerning electrically charged black holes with a flat event horizon in anti de Sitter AdS spacetime the firewall does not arise The firewall which surrounds a sufficiently old black hole threatens to develop into a huge crisis since it could occur even when spacetime curvature is small which contradicts general relativity However the end state for asymptotically flat black holes is ill understood since their curvature becomes unbounded This issue is avoided by working with flat charged black holes in AdS The presence of electrical charge is crucial since black holes inevitably pick up charges throughout their long lifetime These black holes always evolve toward extremal limit and are then destroyed by quantum gravitational effects This happens sooner than the time required to decode Hawking radiation so that the firewall never sets in as conjectured by Harlow and Hayden Motivated by the information loss paradox the author also investigates the possibility that monster configurations might exist with an arbitrarily large interior bounded by a finite surface area Investigating such an object in AdS shows that in the best understood case such an object much like a firewall cannot exist

Concepts of Mass in Contemporary Physics and Philosophy Max Jammer, 2009-06-08 The concept of mass is one of the most fundamental notions in physics comparable in importance only to those of space and time But in contrast to the latter which are the subject of innumerable physical and philosophical studies the concept of mass has been but rarely investigated Here Max Jammer a leading philosopher and historian of physics provides a concise but comprehensive coherent and self contained study of the concept of mass as it is defined interpreted and applied in contemporary physics and as it is critically examined in the modern philosophy of science With its focus on theories proposed after the mid 1950s the book is the first of its kind covering the most recent experimental and theoretical investigations into the nature of mass and its role in modern physics from the realm of elementary particles to the cosmology of galaxies The book begins with an analysis of the persistent difficulties of defining inertial mass in a noncircular manner and discusses the related question of whether mass is an observational or a theoretical concept It then studies the notion of mass in special relativity and the delicate

problem of whether the relativistic rest mass is the only legitimate notion of mass and whether it is identical with the classical Newtonian mass This is followed by a critical analysis of the different derivations of the famous mass energy relationship $E = mc^2$ and its conflicting interpretations Jammer then devotes a chapter to the distinction between inertial and gravitational mass and to the various versions of the so called equivalence principle with which Newton initiated his Principia but which also became the starting point of Einstein's general relativity which supersedes Newtonian physics The book concludes with a presentation of recently proposed global and local dynamical theories of the origin and nature of mass Destined to become a much consulted reference for philosophers and physicists this book is also written for the nonprofessional general reader interested in the foundations of physics
