Calculus Gilbert Strang, 1991-01-01 contient des exercices

Fundamentals of Taxation for Individuals and Business Entities Gregory A. Carnes, Suzanne Youngberg, 2024-06-12 An innovative approach to understanding the federal income tax laws and using them to develop tax efficient strategies for individuals and businesses Present the big picture with a practice based approach to understanding tax laws so students can develop critical thinking and problem solving skills that prepare them for the real world Fundamentals of Taxation for Individuals and Business Entities 2025 Edition introduces a logical foundation for the income tax system so students can understand why a law exists and how to apply the law to practical tax problems Professional skill building exercises develop critical thinking and communication skills and the ability to identify and address ethical dilemmas preparing students to be effective tax professionals

Optimal Redistributive Taxation Matti Tuomala, 2016 Tax systems raise large amounts of revenue for funding public sector's activities and tax transfer policy together with public provision of education health care and social services play a crucial role in treating the symptoms and the causes of poverty The normative analysis is crucial for tax transfer design because it makes it possible to assess separately how changes in the redistributive criterion of the government and changes in the size of the behavioural responses to taxes and transfers affect the optimal tax transfer system Optimal tax theory provides a way of thinking rigorously about these trade offs Written primarily for graduate students and researchers this volume is intended as a textbook and research monograph connecting optimal tax theory to tax policy It comments on some policy recommendations of the Mirrlees Review and builds on the authors work on public economics optimal tax theory behavioural public economics and income inequality The book explains in depth the Mirrlees model and presents various extensions of it The first set of extensions considers changing the preferences for consumption and work behavioural economic modifications such as positional externalities prospect theory paternalism myopic behaviour and habit formation but also heterogeneous work preferences besides differences in earnings ability The second set of modifications concerns the objective of the government The book explains the differences in optimal redistributive tax systems when governments instead of maximising social welfare minimise poverty or maximise social welfare based on rank order or charitable conservatism social welfare functions The third set of extensions considers extending the Mirrlees income tax framework to allow for differential commodity taxes capital income taxation public goods provision public provision of private goods and taxation commodities that generate externalities The fourth set of extensions considers incorporating a number of important real word extensions such as tagging of tax schedules to certain groups of tax payers In all extensions the book illustrates the main mechanisms using advanced numerical simulations
