Rings Hopf Algebras And Brauer Groups:

Rings, Hopf Algebras, and Brauer Groups Stefaan Caenepeel, A Verschoren, 1998-02-04 Based on papers presented at a recent international conference on algebra and algebraic geometry held jointly in Antwerp and Brussels Belgium Presents both survey and research articles featuring new results from the intersection of algebra and geometry **Brauer Groups, Hopf Algebras and Galois Theory** Stefaan Caenepeel, 2002-04-14 This volume is devoted to the Brauer group of a commutative ring and related invariants Part I presents a new self contained exposition of the Brauer group of a commutative ring Included is a systematic development of the theory of Grothendieck topologies and étale cohomology and discussion of topics such as Gabber's theorem and the theory of Taylor's big Brauer group of algebras without a unit Part II presents a systematic development of the Galois theory of Hopf algebras with special emphasis on the group of Galois objects of a cocommutative Hopf algebra The development of the theory is carried out in such a way that the connection to the theory of the Brauer group in Part I is made clear Recent developments are considered and examples are included The Brauer Long group of a Hopf algebra over a commutative ring is discussed in Part III This provides a link between the first two parts of the volume and is the first time this topic has been discussed in a monograph Audience Researchers whose work involves group theory The first two parts in particular can be recommended for supplementary graduate course use **Brauer Groups, Hopf Algebras, and Galois Theory** Stefaan Caenepeel, 1998 This volume is devoted to the Brauer group of a commutative ring and related invariants Part I presents a self contained exposition of the Brauer group of a commutative ring Included is a systematic development of the theory of Grothendieck topologies and étale cohomology and discussion of topics such as Gabber's theorem and the theory of Taylor's big Brauer group of algebras without a unit Part II presents a systematic development of the Galois theory of Hopf algebras with special emphasis on the group of Galois objects of a cocommutative Hopf algebra **Algebra And Number Theory** Mohammed Boulagouaz, Jean-Pierre Tignol, 1999-11-09 This study demonstrates the key manipulations surrounding Brauer groups graded rings group representations ideal classes of number fields p -adic differential equations and rationality problems of invariant fields displaying a command of the most advanced methods in algebra It describes new developments in noncommutative valuation theory and **Ring Theory And Algebraic Geometry** A. Granja, J.A. Hermida Alonso, A Verschoren, 2001-05-08 Focuses on the interaction between algebra and algebraic geometry including high level research papers and surveys contributed by over 40 top specialists representing more than 15 countries worldwide Describes abelian groups and lattices algebras and binomial ideals cones and fans affine and projective algebraic varieties simplicial and cellular complexes polytopes and arithmetics **Locally Compact Quantum Groups and Groupoids** Leonid Vainerman, 2008-08-22 The book contains seven refereed research papers on locally compact quantum groups and groupoids by leading experts in the respective fields These contributions are based on talks presented on the occasion of the meeting between mathematicians and theoretical physicists held in Strasbourg from February 21 to

February 23 2002 Topics covered are various constructions of locally compact quantum groups and their multiplicative unitaries duality theory for locally compact quantum groups combinatorial quantization of flat connections associated with SL 2 c quantum groupoids especially coming from Depth 2 Extensions of von Neumann algebras C algebras and Rings Many mathematical results are motivated by problems in theoretical physics Historical remarks set the results presented in perspective Directed at research mathematicians and theoretical physicists as well as graduate students the volume will give an overview of a field of research in which great progress has been achieved in the last few years with new ties to many other areas of mathematics and physics

Proceedings of the Third International Algebra Conference Yuen Fong,Long-Sheng Shiao,Efim Zelmanov,2013-11-11 This volume contains one invited lecture which was presented by the 1994 Fields Medalist Professor E Zelmanov and twelve other papers which were presented at the Third International Conference on Algebra and Their Related Topics at Chang Jung Christian University Tainan Republic of China during the period June 26 July 1 2001 All papers in this volume have been refereed by an international referee board and we would like to express our deepest thanks to all the referees who were so helpful and punctual in submitting their reports Thanks are also due to the Promotion and Research Center of National Science Council of Republic of China and the Chang Jung Christian University for their generous financial support of this conference The spirit of this conference is a continuation of the last two International Tainan Moscow Algebra Workshop on Algebras and Their Related Topics which were held in the mid 90 s of the last century The purpose of this very conference was to give a clear picture of the recent development and research in the fields of different kinds of algebras both in Taiwan and in the rest of the world especially say Russia Europe North America and South America Thus we were hoping to enhance the possibility of future cooperation in research work among the algebraists of the five continents Here we would like to point out that this algebra gathering will constantly be held in the future in the southern part of Taiwan

Hopf Algebras and Quantum Groups Stefaan Caenepeel,2019-05-07 This volume is based on the proceedings of the Hopf Algebras and Quantum Groups conference at the Free University of Brussels Belgium It presents state of the art papers selected from over 65 participants representing nearly 20 countries and more than 45 lectures on the theory of Hopf algebras including multiplier Hopf algebras and quantum g

Handbook of Algebra M. Hazewinkel,2006-05-30 Algebra as we know it today consists of many different ideas concepts and results A reasonable estimate of the number of these different items would be somewhere between 50 000 and 200 000 Many of these have been named and many more could and perhaps should have a name or a convenient designation Even the nonspecialist is likely to encounter most of these either somewhere in the literature disguised as a definition or a theorem or to hear about them and feel the need for more information If this happens one should be able to find enough information in this Handbook to judge if it is worthwhile to pursue the quest In addition to the primary information given in the Handbook there are references to relevant articles books or lecture notes to help the reader An excellent index has been included which is extensive and not

limited to definitions theorems etc The Handbook of Algebra will publish articles as they are received and thus the reader will find in this third volume articles from twelve different sections The advantages of this scheme are two fold accepted articles will be published quickly and the outline of the Handbook can be allowed to evolve as the various volumes are published A particularly important function of the Handbook is to provide professional mathematicians working in an area other than their own with sufficient information on the topic in question if and when it is needed Thorough and practical source for information Provides in depth coverage of new topics in algebra Includes references to relevant articles books and lecture notes

Rundbrief der Gesellschaft für Angewandte Mathematik und Mechanik Gesellschaft für Angewandte Mathematik und Mechanik,1998 *Separable Algebras over Commutative Rings* Frank De Meyer,Edward

Ingraham,2006-11-15 These lecture notes were prepared by the authors for use in graduate courses and seminars based on the work of many earlier mathematicians In addition to very elementary results presented for the convenience of the reader Chapter I contains the Morita theorems and the definition of the projective class group of a commutative ring Chapter II addresses the Brauer group of a commutative ring and automorphisms of separable algebras Chapter III surveys the principal theorems of the Galois theory for commutative rings In Chapter IV the authors present a direct derivation of the first six terms of the seven term exact sequence for Galois cohomology In the fifth and final chapter the authors illustrate the preceding material with applications to the structure of central simple algebras and the Brauer group of a Dedekind domain and they pose problems for further investigation Exercises are included at the end of each chapter *Brauer Groups* Daniel

Zelinsky,1976 Bulletin of the Belgian Mathematical Society, Simon Stevin ,2006 *Algebra Colloquium* ,2002 **Israel Journal of Mathematics** ,1990 **Mathematical Reviews** ,2007 *Classical and Involutive Invariants of Krull Domains*

M.V. Reyes Sánchez,A. Verschoren,1999-07-31 This monograph is devoted to Krull domains and its invariants The book shows how a serious study of invariants of Krull domains necessitates input from various fields of mathematics including rings and module theory commutative algebra K theory cohomology theory localization theory and algebraic geometry About half of the book is dedicated to so called involutive invariants such as the involutive Brauer group and is essentially the first to cover these topics In a structured and methodical way the work presents a large quantity of results previously scattered throughout the literature Audience This volume is recommended as a first introduction to this rapidly developing subject but will also be useful as a state of the art reference work both to students at graduate and postgraduate levels and to
