

PREFACE

It is clear from the book itself that it is really divided into two parts. The former is essentially the study of rings and algebras which are not π -rings and the latter is devoted to the study of rings which are π -rings. The former part is devoted to the study of rings which are not π -rings and the latter part is devoted to the study of rings which are π -rings. The former part is devoted to the study of rings which are not π -rings and the latter part is devoted to the study of rings which are π -rings.

RINGS WITH MINIMUM CONDITION

BY

EMIL ARTIN

CECIL J. NESBITT

ROBERT M. THRALL

From this viewpoint the natural starting place is the concept of vector space over a ring, that is, a vector space with a ring of operators, and this forms the topic of Chapter I. In Chapter II the subject of minimum condition on vector spaces over a ring and, in particular, minimum condition on left ideals of a ring are examined. A main theorem is developed here, whose simplified proof is due to H. Krull, that every non-zero left ideal of a ring with minimum condition on left ideals contains an indecomposable element.

Chapter III is a discussion of the connection between vector spaces over a ring and left operator systems, and a special case of operator systems with corresponding representations of the ring by matrices with coefficients from the ring.

It appears in Chapter IV that the study of unimodular rings may

Rings With Minimum Condition:

Structure of Rings Nathan Jacobson, 1964 The main purpose of this volume is to give an account of the important developments in the theory of non commutative rings These are the structure theory of rings without finiteness assumptions cohomology of algebras and structure and representation theory of non semi simple rings Frobenius algebras quasi Frobenius rings

Rings with Minimum Condition Emil Artin, Cecil James Nesbitt, Robert McDowell Thrall, 1952

Rings and Homology James P. Jans, 2015-01-05 This concise text is geared toward students of mathematics who have completed a basic college course in algebra Combining material on ring structure and homological algebra the treatment offers advanced undergraduate and graduate students practice in the techniques of both areas After a brief review of basic concepts the text proceeds to an examination of ring structure with particular attention to the structure of semisimple rings with minimum condition Subsequent chapters develop certain elementary homological theories introducing the functor Ext and exploring the various projective dimensions global dimension and duality theory Each chapter concludes with a set of exercises

Semidistributive Modules and Rings A.A. Tuganbaev, 2012-12-06 A module M is called distributive if the lattice $\text{Lat } M$ of all its submodules is distributive i.e. $F \cap (G + H) = (F \cap G) + (F \cap H)$ for all submodules F, G and H of the module M A module M is called uniserial if all its submodules are comparable with respect to inclusion i.e. the lattice $\text{Lat } M$ is a chain Any direct sum of distributive resp uniserial modules is called a semidistributive resp serial module The class of distributive resp semidistributive modules properly contains the class of all uniserial resp serial modules In particular all simple resp semisimple modules are distributive resp semidistributive All strongly regular rings for example all factor rings of direct products of division rings and all commutative regular rings are distributive all valuation rings in division rings and all commutative Dedekind rings e.g. rings of integral algebraic numbers or commutative principal ideal rings are distributive A module is called a Bezout module or a locally cyclic module if every finitely generated submodule is cyclic If all maximal right ideals of a ring A are ideals e.g. if A is commutative then all Bezout A modules are distributive

Cyclic Modules and the Structure of Rings S. K. Jain, Ashish K. Srivastava, Askar A. Tuganbaev, 2012-09-27 This unique and comprehensive volume provides an up to date account of the literature on the subject of determining the structure of rings over which cyclic modules or proper cyclic modules have a finiteness condition or a homological property The finiteness conditions and homological properties are closely interrelated in the sense that either hypothesis induces the other in some form This is the first book to bring all of this important material on the subject together Over the last 25 years or more numerous mathematicians have investigated rings whose factor rings or factor modules have a finiteness condition or a homological property They made important contributions leading to new directions and questions which are listed at the end of each chapter for the benefit of future researchers There is a wealth of material on the topic which is combined in this book it contains more than 200 references and is not claimed to be exhaustive This book will appeal to graduate students

researchers and professionals in algebra with a knowledge of basic noncommutative ring theory as well as module theory and homological algebra equivalent to a one year graduate course in the theory of rings and modules Rings with Maximum Condition Alfred William Goldie,1961 *Rings with Minimum Condition* Emil Artin,1955 *Rings with Minimum Condition* Emil Artin,Cecil J.
