Rise Of Capitalism:

The Cambridge History of Capitalism: Volume 1, The Rise of Capitalism: From Ancient Origins to 1848 Larry Neal, Jeffrey G. Williamson, 2014-01-23 The first volume of The Cambridge History of Capitalism provides a comprehensive account of the evolution of capitalism from its earliest beginnings Starting with its distant origins in ancient Babylon successive chapters trace progression up to the Promised Land of capitalism in America Adopting a wide geographical coverage and comparative perspective the international team of authors discuss the contributions of Greek Roman and Asian civilizations to the development of capitalism as well as the Chinese Indian and Arab empires They determine what features of modern capitalism were present at each time and place and why the various precursors of capitalism did not survive Looking at the eventual success of medieval Europe and the examples of city states in northern Italy and the Low Countries the authors address how British mercantilism led to European imitations and American successes and ultimately how capitalism became global

Religion and the Rise of Capitalism Richard Henry Tawney, 1926

Political Economy and the Rise of Capitalism David McNally, 2024-06-21 From the Introduction This book challenges the conventional wisdom about classical political economy and the rise of capitalism It is written in the conviction that modern interpretations of political economy have suffered terribly from acceptance of the prevailing liberal view of the origins and development of capitalist society By the liberal account capitalism emerged out of the centuries old competitive activities of merchants and manufacturers in rational pursuit of their individual economic self interest Over time this account claims the persistent activity of these classes developed new forms of wealth and productive resources and new intellectual and cultural habits which eroded the existing structure of society The rise of capitalism is thus explained in terms of the rise to prominence of the most productive rational and progressive social groups merchants and manufacturers Not surprisingly classical political economy came to be seen as an intellectual reflection of the ascendance of merchants and manufacturers and as a theoretical justification of their interests and activities This book argues that capitalism was the product of an immense transformation in the social relationships of landed society and that this fact is crucial to understanding the development of classical political economy Without a radical transformation of the agrarian economy the activities of merchants and manufacturers would have remained strictly confined By no inexorable logic of their own were mercantile and industrial activities capable of fundamentally transforming the essential relations of precapitalist society Rather the changes in agrarian economy which drove rural producers from their land forced them onto the labour market as wage labourers for their means of subsistence and refashioned farming as an economic activity based upon the production of agricultural commodities for profit on the market established the essential relations of modern capitalism In what follows these processes are described in terms of the emergence of agrarian capitalism This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a

Elsenhans,2021-09-08 The dominant neoliberal approach presents politics and political economy as nuisances which disturb the smooth operation of self regulating markets But political economy is not merely an academic issue it is a class issue and this book forcefully argues that political economy should return to a central position in the study of the social sciences Offering nothing less than a reconciliation of Marxian Keynesian and neoclassical economics the work opens with a discussion of the key interconnected economic concepts which help us to understand capitalism price income profit value growth and crisis Prices reflect income distribution and therefore class relations and the chapters show that the very emergence of capitalism resulted from mass empowerment of the so called lower orders Profit is always available if entrepreneurs spend on net investment and create incomes for additional labour this in turn requires expanding demand and so therefore profit depends on rising mass incomes Conversely underdevelopment is the result of the destitution and disempowerment of the masses In the Global South today it is clear that enormous riches go hand in hand with widespread misery and poverty because the market does not transform wealth into the kind of investment that might benefit all This book argues that the new wealth triggered by productivity increases has enabled the rich to liberate themselves from the capitalist constraints of competition and waste their new wealth in the form of rents The main threat today is in fact the globalisation of rent The text makes a point for a progressive counter strategy capitalist structures that empower labour need to be transferred to the Global South This requires political and economic efforts towards empowering labour in the Global South This book demonstrates the analytical power of political economy for all social scientists and will be invaluable reading for economists political scientists and sociologists in particular

Greening of Capitalism John A. Mathews,2014-12-17 As China India and other industrializing giants grow they are confronted with an inconvenient truth They cannot rely on the conventions of capitalism as we know them today Western industrialism has achieved miracles promoting unprecedented levels of prosperity and raising hundreds of millions out of poverty Yet if allowed to proceed unencumbered this paradigm will do irreversible harm to the planet By necessity a new approach to environmentally conscious development is already emerging in the East with China leading the way Positioning its argument against zero growth advocates and free market environmentalists Greening of Capitalism charts this transformation and sketches out a framework for more sustainable capitalism State mandated changes in energy use as opposed to carbon taxes a circular flow of resources as opposed to emissions standards and the introduction of new financial instruments that support green growth are cornerstones of China s framework John A Mathews argues that these tenets will be emulated around the world first in India and Brazil In light of this emerging shift Mathews considers core debates over national security international relations and economic policy
