## **Risk And Reliability In Marine Technology:**

*Risk and Reliability in Marine Technology* C. Soares Guedes, 1998-01-01 Experience has shown that introducing risk analysis in the initial phases of any design often has important beneficial effects on both safety and economy It has also become well accepted that structural design can occur on a sounder basis if the concepts of structural reliability are applied in that they provide a consistent base to deal with uncertainties and to establish safety factors Finally the operational cost of running installations depends very much on the maintenance policies applied and these in turn can translate their efficiency in terms of reliability of the systems that are maintained The mathematical tools available to deal with these different types of problems are somewhat different but they have several common features The main one is the use of probabilistic models to predict the probability of failure or its complement reliability This book explores the complementarity that exists among these different types of formulations by presenting an overall view of the tools that can be used in the phase of conceptual design of detail design and in the operational phase Emphasis is on Marine Technology in that most of the applications presented are related either to offshore platforms or to ships However the applicability of the methods presented is not restricted to this field In particular the contributions on reliability of systems are very general and applicable to any type of system repairable or non repairable The work is broadly organised in three sections dealing with risk assessment structural reliability and system reliability In the first section the main methods of quantitative risk analysis are presented together with case studies that provide an illustration of how they can be applied The section on structural reliability presents the probabilistic formulations that are required for the reliability assessment of the marine structures The last section deals with reliability of systems a formulation that is essential for the different types of equipment existing in ship and offshore platforms Contributions are by a group of international experts in the field

**Online Probabilistic Risk Assessment of Complex Marine Systems** Tarannom Parhizkar, Ingrid B. Utne, Jan-Erik Vinnem, 2021-11-26 This book proposes a new approach to dynamic and online risk assessment of automated and autonomous marine systems taking into account different environmental and operational conditions The book presents lessons learnt from dynamic positioning incidents and accidents and discusses the challenges of risk assessment of complex systems The book begins by introducing dynamic and online risk assessment before presenting automated and autonomous marine systems as well as numerous dynamic positioning incidents It then discusses human interactions with technology and explores how to quantify human error Dynamic probabilistic risk assessment and online risk assessment are both considered fully including case studies with the application of assisting operators in decision making in emergency situations Finally areas for future research are suggested This practical volume offers tools and methodologies to help operators make better decisions and improve the safety of automated and autonomous marine systems It provides a guideline for researchers and

practitioners to perform dynamic probabilistic and online risk assessment which also should be applicable to other complex systems outside the marine and maritime domain such as nuclear power plants chemical processes autonomous transport systems and space shuttles

*Risk, Reliability and Safety: Innovating Theory and Practice* Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25 The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk From complex infrastructures to consumer durables from engineering systems and technologies used in transportation health energy chemical oil gas aerospace maritime defence and other sectors the management of risk during design manufacture operation and decommissioning is vital Methods and models to support risk informed decision making are well established but are continually challenged by technology innovations increasing interdependencies and changes in societal expectations Risk Reliability and Safety contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow Scotland 25-29 September 2016 Authors include scientists academics practitioners regulators and other key individuals with expertise and experience relevant to specific areas Papers include domain specific applications as well as general modelling methods Papers cover evaluation of contemporary solutions exploration of future challenges and exposition of concepts methods and processes Topics include human factors occupational health and safety dynamic and systems reliability modelling maintenance optimisation uncertainty analysis resilience assessment risk and crisis management
