of Cancer Matti Hakama, 1990 This book examines the current state of evidence relating to the effectiveness of primary prevention measures The identification of environmental and lifestyle factors as causes of cancer means that the theoretical basis for the prevention of cancer is well established Despite this there have been relatively few studies which examine the effectiveness of different strategies in reducing cancer causing exposures and even fewer where the results in terms of cancers avoided can be assessed Most such evidence derives from observational studies which show that changes in cancer incidence occur when diet or tobacco use are modified even in modification is not the result of an organized preventive action The occupational field too provides good examples of reduction in exposure to carcinogens if not always because of their carcinogenic hazard and consequent reductions in cancer incidence This volume provides an in depth study of four intervention studies examining their outcome in terms of cancer risk It also reviews the results of several other previously published studies and provides a convenient summary of results as well as information on future prospects *Directory of On-going Research in Cancer Epidemiology 1986* C. S. Muir, 1986 This new directory is a list of 1 352 projects being undertaken in 71 countries particularly the U S and the U K It includes the first projects on molecular epidemiology as well as work done in mutation epidemiology It also lists biological material banks and their holdings population based cancer registries and tabulations of the funds expended by various institutes and registries **Musculoskeletal Disorders in the Workplace** Margareta Nordin, Malcolm Henry Pope, 2007 Covers both the theoretical background and the clinical management as well as the biomechanics and ergonomics of orthopedic injuries occurring in the workplace
