

Risk Model for Cross-Boring

Moderator: Tony Sileo

Opvantek is exploring development of a risk model to help optimize cross bore inspection programs based on data collected from various interesting data sources. We will provide an update on this activity and also solicit presentations or discussion from across the user group on your own experiences and requirements related to the cross bore threat.

Objectives

- Identify data sources that can be used to find indications of legacy cross bore repairs.
- Review and gather input on other factors that make the likelihood of a cross bore more or less likely.
- Share initial results from a cross bore risk model developed in collaboration with one of our customers to help prioritize a legacy cross bore inspection program.
