## **Risk Science And Politics Regulating Toxic Substances In Canada And The United States:**

**Risk, Science, and Politics** Kathryn Harrison, George Hoberg, 1994-11-18 Paying particular attention to how politicians and bureaucrats in the two countries deal with the scientific uncertainty that pervades environmental decision making Harrison and Hoberg analyse case studies of seven controversial substances suspected of causing cancer in humans the pesticides Alar and alachlor urea formaldehyde foam insulation radon gas dioxin saccharin and asbestos They weigh the strengths and weaknesses of each country's approach according to five criteria stringency and timeliness of the regulatory decision balancing of risks and benefits by decision makers opportunities for public participation and the interpretation of science in regulatory decision making The Canadian approach is exemplified by closed decision making case by case review that relies heavily on expert judgement and limited public debate about the scientific basis of regulatory decisions In contrast regulatory science in the United States is characterized by publication of lengthy rationales for regulatory decisions reliance on standardized procedures for risk assessment and controversy surrounding the interpretation of scientific evidence

**Risk, Science, and Politics** Kathryn Harrison, George Hoberg, 1994 Government regulation of toxic substances in Canada and the United States is examined and compared in Risk Science and Politics Kathryn Harrison and George Hoberg report dramatically different approaches to regulatory science in the two countries **Uncertain Risks Regulated** Ellen Vos, Michelle Everson, 2009-01-26 In the modern world policy makers industry and its regulators are increasingly required to take decisions in the face of unknowable or indeterminate risks This book compares various models of risk regulation examining national EU and international WTO regulatory systems for food safety and genetically modified organisms

**Achieving Regulatory Excellence** Cary Coglianese, 2016-12-20 Whether striving to protect citizens from financial risks climate change inadequate health care or the uncertainties of the emerging sharing economy regulators must routinely make difficult judgment calls in an effort to meet the conflicting demands that society places on them Operating within a political climate of competing demands regulators need a lodestar to help them define and evaluate success Achieving Regulatory Excellence provides that direction by offering new insights from law public administration political science sociology and policy sciences on what regulators need to do to improve their performance Achieving Regulatory Excellence offers guidance from leading international experts about how regulators can set appropriate priorities and make sound evidence based decisions through processes that are transparent and participatory With increasing demands for smarter but leaner government the need for sound regulatory capacity for regulatory excellence has never been stronger In addition to chapters by editor Cary Coglianese and a foreword by Jim Ellis president and chief executive officer of the Alberta Energy Regulator contributors include Robert Baldwin London School of Economics and Political Science John Braithwaite Australian National University Angus Corbett University of Pennsylvania Daniel Esty Yale University Adam Finkel University of Pennsylvania and University of Michigan Ted Gayer Brookings Institution John Graham Indiana University Neil Gunningham Australian

**Welt im Wandel: Strategien zur Bewältigung globaler Umweltrisiken** Wissenschaftlicher Beirat der Bundesregierung Globale Umweltveränderungen, 2013-03-07 **Canada and the United States** David Thomas, David Martin Thomas, 1993 Deeply substantive thoughtful up to date and lively For anyone wanting to understand the differences and similarities between these two countries and the reasons behind them this is the place to start Kent Weaver Senior Fellow in Governance Studies The Brookings Institution Poison Powder Gregory S. Wilson, 2023-04 In 1975 workers at Life Science Products a small makeshift pesticide factory in Hopewell Virginia became ill after exposure to Kepone the brand name for the pesticide chlordecone They made the poison under contract for a much larger Hopewell company Allied Chemical Life Science workers had been breathing in the dust for more than a year Ingestion of the chemical made their bodies seize and shake News of ill workers eventually led to the discovery of widespread environmental contamination of the nearby James River and the landscape of the small working class city Not only had Life Science dumped the chemical but so had Allied when the company manufactured it in the 1960s and early 1970s The resulting toxic impact was not only on the city of Hopewell but also on the faraway fields where Kepone was used as an insecticide Aspects of this environmental tragedy are all too common corporate avarice ignorance and regulatory failure combined with race and geography to determine toxicity and shape the response But the Kepone story also contains some surprising medical legal and political moments amid the disaster With Poison Powder Gregory S Wilson explores the conditions that put the Kepone factory and the workers there in the first place and the effects of the poison on the people and natural world long after 1975 Although the manufacture and use of Kepone is now banned by the Environmental Protection Agency organochlorines have long half lives and these toxic compounds and their residues still remain in the environment

Book News Inc Portland OR      **Canadian Environmental Policy** Robert Boardman, Debora VanNijnatten, 2002 Now in its second edition this book focuses on the character and significance of the politics and processes that underlie policy making on the environment It has been redesigned to reflect major trends and changes in environmental policy during the 1990s such as the effects of budgetary restraints on environmental policy and the growing importance of the provinces as environmental policy actors      Politics of the Wild Karen Beazley, Robert Boardman, 2001 Politics of the Wild details the 353 species at risk in Canada and considers both the intrinsic and the instrumental reasons for protecting biological diversity It examines the need for habitat protection terrestrial protected areas such as national parks marine species at risk and the various legislative and interest group attempts to preserve biodiversity Public policy on endangered species is considered from both historical and comparative perspectives as is Canada's role in establishing international agreements the Convention on International Trade in Endangered Species and the Convention on Biological Diversity and the government's failure in recent years to meet the obligations of these and other environmental agreements The final chapter looks at the Species at Risk Act SARA and its recent predecessor Bill C 65 and reveals the difficulties of crafting and passing such legislation in an increasingly decentralized federal state such as Canada Both legislative attempts were criticized by the environmental policy community for not doing enough and by the provinces and business for trying to do too much All the while diverse regional interests and economic imperatives run the risk of endangering far more than merely Canadian species at risk      Managing the Environmental Union Queen's University (Kingston, Ont.). Institute of Intergovernmental Relations, Queen's University (Kingston, Ont.). School of Policy Studies, Saskatchewan Institute of Public Policy, 2000 Ottawa and the provinces share responsibility for environmental protection As a result environmental policy is an area that offers some insight into how the two orders of government interact Managing the Environmental Union brings together a diverse set of authors from law political science and policy studies to consider how we think about intergovernmental relations and environmental policy and what drives the two orders of government toward various patterns of cooperation competition conflict and mutual avoidance The authors offer insights into the consequences of these patterns for both environmental protection as well as for the broader sweep of intergovernmental relations They compare Canada to the United States and to other federations notably Germany and Australia Managing the Environmental Union offers a detailed account of how and to a certain extent why governments interact in the ways that they do demonstrating the merits of moving beyond a simple dichotomy of conflict or cooperation when describing intergovernmental relations      *PAIS International in Print* Gwen Sloan, 1996-03      *Environmental Ethics*, 1994
