*New International Directions in HIV Prevention for Gay and Bisexual Men* Michael T. Wright, B. R. Simon Rosser, 1998

Contributors from Europe and North America challenge the dominant paradigms of HIV prevention and explore models and theories to help professionals develop more effective prevention programs They consider such factors as improving successful risk management strategies rather than quantifying risk factors examining the meaning and context of sexual acts that occur in casual encounters and steady partnerships and their relevance to prevention harm reduction rather than expecting abstinence and relating such aspects of sexual encounters as physical attraction intimacy reciprocity and power to why men choose not to use condoms Paper edition 1 56023 116 5 22 95 Also published as *Journal of Psychology and Human Sexuality* vol 10 nos 3 4 1998 Annotation copyrighted by Book News Inc Portland OR

ideas and developments including placing a greater emphasis on improving successful risk management strategies as opposed to quantifying risk factors examining the meaning and context of sexual acts which occur in casual encounters or steady partnerships and incorporating their relevancy into prevention work considering the effects that cultural context and socially constructed meanings have on prevention work and incorporating individuals values and feelings into prevention strategies focusing on more realistic goals of harm reduction that take sexual decision making into consideration as opposed to expecting abstinence relating the various aspects of sexual encounters physical attraction intimacy reciprocity and power to reasons why men choose not to use condoms Examining how gay men can underestimate the risk of HIV in order to meet needs of intimacy New International Directions in HIV Prevention for Gay and Bisexual Men will help you understand the symbolic dimension of sexual contact The normal everyday reasons for having sex without a condom are explored questioning models which often characterize unprotected sex as being the result of low self esteem substance abuse or some other psychological vulnerability Presenting data from both qualitative and quantitative research conducted at group and individual levels this book reveals the complexity of risk behavior the richness of sexual experience and the importance of respecting the unique context in which gay men live their sexual lives New International Directions in HIV Prevention for Gay and Bisexual Men will help you understand this point of view enabling you to provide patients and clients with more effective HIV prevention and risk management services **Risikoverhalten und Schutz vor Aids** Jürgen Bengel, 1996
