The book contains a few survey papers and many research articles. The latter have been written in an accessible style and should be of interest to specialists, researchers, and graduate students. The subjects cover classical ring theory, e.g., Baer rings, separativity problem, group algebras, quasi duo coding theory, MacWilliams identities, codes over Galois rings, or from Lie algebras. Quadratic forms are also present in two important and nicely written papers. Finally, some papers offer new perspectives moving from classical ring theory to universal algebras and non-associative structures.
