

Ideal

A subring A of a ring R is called a (two-sided) ideal of R if for every $r \in R$ and every $a \in A$ both ra and ar are in A .

Theorem 1 (Ideal Test):

A nonempty subset A of a ring R is an ideal of R if

1. $a - b \in A$ whenever $a, b \in A$.
2. ra and ar are in A whenever $a \in A$ and $r \in R$.

EXAMPLE 1:

For any ring R , $\{0\}$ and R are ideals of R . The ideal $\{0\}$ is called the trivial ideal.

Rings And Ideals:

Rings and Ideals Neal H. McCoy, 1948-12-31 This monograph presents an introduction to that branch of abstract algebra having to do with the theory of rings with some emphasis on the role of ideals in the theory Except for a knowledge of certain fundamental theorems about determinants which is assumed in Chapter VIII and at one point in Chapter VII the book is almost entirely self contained Of course the reader must have a certain amount of mathematical maturity in order to understand the illustrative examples and also to grasp the significance of the abstract approach However as far as formal technique is concerned little more than the elements of algebra are presupposed

Algebraic Structures W.C. Holland, Jorge Martínez, 1997-03-31 The conference on Ordered Algebraic Structures held in

Curat ao from the 26th of June through the 30th of June 1995 at the Avila Beach Hotel marked the eighth year of activities by the Caribbean Mathematics Foundation abbr CMF which was the principal sponsor of this conference CMF was inaugurated in 1988 with a conference on Ordered Algebraic Structures During the years between these two conferences the field has changed sufficiently both from my point of view and I believe that of my co organizer W Charles Holland to make one wonder about the label Ordered Algebraic Structures itself We recognized this from the start and right away this conference carried a subtitle or if one prefers an agenda we concentrated on the one hand on traditional themes in the theory of ordered groups including model theoretic aspects and on the other hand on matters in which topology more precisely C X style topology and category theory would play a prominent role Plainly ordered algebra has many faces and it is becoming increasingly difficult to organize an intimate conference such as the ones encouraged in the series sponsored by CMF in this area on a broad set of themes These proceedings reflect accurately we think the spirit of the conferees but it is not a faithful record of the papers presented at the conference
