**The Rise of the Technocrats** W.H.G. Armytage, 2013-10-28 First published in 2006 The ambitious role cast for scientists in public affairs has been matched by an equal coyness on the part of scientists to play it Yet in spite of themselves they have been virtually dragged on to the political stage because of their collectivities groups formed over the last four centuries often more fugitive than institutional which have helped modify the human environment thereby enabling men to emancipate themselves from the tyranny of the present and plan for the future The byproducts of such plans from the great botanical gardens to the seed beds of physical scientists like the Ecole Polytechnique have also incubated further ideas about the relation of science and society that are ecumenical in scope Indeed the positivist overtones of the Polytechnique herald the transition from platocracy to technocracy for the technical intelligentsia trained its German Russian and American counterparts have effected a quasi religious synthesis of physics and politics In this planning was the central theme The social history of such planning with the concomitant views on the social organisation of science is the subject of the book Pressurising it is the conviction that we can identify a particular thing only by pointing to the various things it successively was before it became that particular thing that it will presently cease to be and the story which begins four hundred years ago and ends in 1964

Higher Education and the Growth of Knowledge Michael Segre, 2015-07-24 This book sketches the history of higher education in parallel with the development of science Its goal is to draw attention to the historical tensions between the aims of higher education and those of science in the hope of contributing to improving the contemporary university A helpful tool in analyzing these intellectual and social tensions is Karl Popper s philosophy of science demarcating science and its social context Popper defines a society that encourages criticism as open and argues convincingly that an open society is the most appropriate one for the growth of science A closed society on the other hand is a tribal and dogmatic society Despite being the universal home of science today the university as an institution that is thousands of years old carries traces of different past cultural social and educational traditions The book argues that by and large the university was and still is a closed society and does not serve the best interests of the development of science and of students education

*The New Technocracy* Anders Esmark, 2020-04-08 Setting a new benchmark for studies of technocracy this book shows that a solution to the challenge of populism will depend as much on a technocratic retreat as democratic innovation Esmark examines the development since the 1980s of a new post industrial technocratic regime and its complicity in the populist backlash against politics and political elites that is visible today The new technocracy a combination of network governance risk management and performance management has the author argues abandoned the overtly anti democratic sentiments of its industrial predecessor and proclaimed a new partnership with democracy The rise of populism however is a clear sign that the inherent problems of this partnership have been exposed and that technocracy posing as democracy will only serve to exacerbate existing problems

**Organization as Technocratic Utopia** Jens Steffek, 2021 This volume examines the development of the idea of technocratic internationalism the promotion of the involvement of experts in the workings of international relations especially in international organizations such as the United Nations and European Union

**Nazi Volksgemeinschaft Technology** John C. Guse, 2023-10-26 This book traces how Gottfried Feder and Fritz Todt made technology essential to the Nazi world view They groomed engineers with a racist technical ideology that prepared them to later supervise slave labor and the Holocaust Their concepts evolved from v lkish technocracy to an idealized harmony of man machine and nature and were eclipsed by Albert Speer s total war Partially due to willing self coordination from engineers they gained political control over the engineering profession Destined to be pillars of the Volksgemeinschaft engineers were indoctrinated with Nazi principles of Aryan superiority at the Reich School of Technology the Plassenburg Nazi propaganda announced a bright future through technology furthering a sense of normalcy in Germany despite the ruthless exclusion of those unwanted

**The American Ideology of National Science, 1919-1930** Ronald C. Tobey, 1971-10-15 Ronald C Tobey provides a provocative analysis of the movement to establish a national science program in the early twentieth century Led by several influential scientists who had participated in centralized scientific enterprises during World War I the new effort to conjoin science and society was an attempt to return to earlier progressive values with the hope of producing science for society s benefit The movement was initially undermined by the new physics and Einstein s theories of relativity which shattered traditional views and alienated the American public Nationalized research programs were tempered by the conservatism of corporate donors Later with the disintegration of progressivism the gap between science and society made it impossible for the two cultures to unite
