The effectiveness of safety management systems implementation in aviation maintenance Kok Meng Chan,2014-04-07 Research Paper undergraduate from the year 2011 in the subject Sociology Methodology and Methods grade 98% University of Newcastle course Masters Of Aviation Management language English abstract Safety management system SMS program is a comprehensive systematic and continuous process for recognizing hazards and managing risks for a viable aviation business to enhance safety With proper guidance and planning from current literature it recognizes the explicit complexity to distill more insights to the aspects of an SMS implementation Real rigor must be in place for the underlying mechanism to detect the weaknesses within the defense mechanism fix it before they are manifested as an undesired event This is a shift from the traditional reactive systems to proactive predictive systems SMS is not a process to solve a specific safety issue but rather an explicit consistent and structured protocol which can resolve many issues to reduce risk realistically or as low as reasonably practicable ALARP The four essential constituents safety policy and goals risk mitigation management safety assurance and safety promotion represents the foundation for SMS This article delineates the SMS processes and the integration of human factors perspectives with the intent to propose an initial implementation program for a maintenance organisation into four phases Ultimately the effectiveness of an SMS implementation means the organization can manage the complexity of these mechanisms to defend against risk incubation to ALARP

Department of Transportation,2011 The unregulated hours and frequent night work characteristic of maintenance can produce significant levels of employee fatigue with a resultant risk of maintenance error Fatigue Risk Management Systems FRMS are widely used to manage fatigue among flight crew and drivers of commercial vehicles but comprehensive approaches to fatigue risk management are still uncommon within maintenance organizations In the wider transport industry the objective of most FRMS has been to reduce fatigue to an acceptable level Two additional objectives can be identified for FRMS in the maintenance environment reducing or capturing fatigue related errors and minimizing the harm caused by fatigue related errors A range of countermeasures can help to achieve these three objectives in aviation maintenance Some of these countermeasures are currently being applied within the industry while others may become feasible in the future The data available on best practices for fatigue risk management in aviation maintenance are continually evolving This should be considered an interim report Report documentation page
