*Economic Crises and Demographic Outcomes* Pungpond Rukumnuaykit, 2003 This dissertation examines the short run impacts of the Indonesian economic crises on different demographic outcomes of infants and women In the first chapter I examine whether the recent Indonesian financial crisis and the 1997 1998 drought and smoke haze crises had adverse effects on infants birthweight and mortality In the second chapter I examine the effects of the 1998 economic crisis on the ages of female first marriages and first births This dissertation uses data from three waves of the Indonesia Family Life Survey IFLS1 1993 IFLS2 1997 and IFLS3 2000 The methodology used in the first chapter is to compare health conditions of newborns of different birth cohorts The estimations of both neonatal and post neonatal mortality risks are carried out using multivariate regressions with socio economic control variables such as mother s education place of residence province community and gender of the child In addition mortality risks are estimated using hazard models to capture the mortality risks at different ages in months The paper uses both nonparametric and parametric hazard models to estimate the hazard rates The effects of the crises on birthweights are analyzed using multivariate regressions and comparisons of birthweight cumulative distributions Estimated results on mortality outcomes show that the financial crisis had adverse impacts on neonatal mortality in both urban and rural areas The adverse effects of the financial crisis on post neonatal mortality risks were larger and more statistically significant for urban infants than for rural infants The drought smoke crisis adversely affected post neonatal mortality risks in rural areas The estimated results show that rural infants born during the drought smoke crisis experienced approximately a 4.4 percentage points increase in their infant mortality risks 4.4 per 1 000 live births The magnitude of the effects almost doubled after controlling for community fixed effects None of the crises significantly affected birthweight I find that the lack of evidence on the adverse effects may be due to selection problems in reported birthweights In the second chapter effects of the crisis on ages of female first marriage and first births are estimated using hazard models The methods used include both parametric and non parametric estimations of the marriage and first birth hazards conditional and unconditional on being married Estimated results indicate that overall there was an increase in the probability of getting married and a decrease in the probability of having first births among Indonesian women during the crisis in both conditional and unconditional analyses These findings support the hypothesis that marriages of individuals in a household and delaying first births may have been used as income smoothing mechanisms in the time of the crisis Results from this paper are not sufficient to draw any conclusion on why an increase in marriage

probability and a delay in having first birth took place We speculate that women are more likely to get married during the time of the crisis to take advantage of economies of scale and specialization in household production and consumption The delays of first births might be due to a consumption smoothing consideration or other supply factors such as the separation of spouses when relocation of individuals occurred during the crisis

Curbing the Global Economic Downturn Aekapol Chongvilaivan,2010 Southeast Asia witnessed a wide array of policy actions at the regional and international levels to unravel the ripple effects of the global economic downturn and to set a stage for a long term recovery Yet the quest for regional and global solutions has been hampered critically by the complication of individual economies and the diverse levels of economic development The objective of this book is to examine in depth region specific research on how macroeconomic tools are at work in the Southeast Asian economies

Coping with Economic Crisis in Agriculture ,1980 Extract Texas farmers and ranchers in early 1980 were faced with a severe cost price squeeze which magnified as the economy moved into a recession and Texas suffered wide spread drought By mid season the number of adjustments producers could make to cope with the crisis were limited however in this report agricultural economists discuss some adjustment possibilities in the area of finance marketing and production economics In addition there is a brief discussion of some analytical tools as well as research results and extension programs that may be of assistance in decision making relating to coping with the economic crisis in agriculture

**Economical and financial analysis of UK during recession in year 2007-2012** Dinesh Chathuranga,2015-09-17 Research Paper undergraduate from the year 2013 in the subject Economics Economic Cycle and Growth grade 81 00% Kingston University London course MBA language English abstract This research study serves to analyse and evaluate economic and financial performance of the UK during global recession in the years of 2007 to 2012 The key economic and financial variables such as GDP growth unemployment rate inflation rate exchange rate balance of payment and FTSE 100 index are analysed and assessed to conclude whether economic and financial performance of UK have been healthier or not Accordingly it is found that economic and financial performance of UK had severely been deteriorating during 2008 and 2009 as aforesaid variables had not shown positive sign towards the economy of UK However it could be observed that UK has gradually been recovering its economy

**Economic Problems of Modern Life S.** Howard Patterson,Karl William Henry Scholz,1927

*The Financial and Economic Crises* Benton E. Gup,2010-01-01 The 2007 financial and economic crisis that began in the United States and quickly spread around the world differed from earlier crises in a number of significant ways This book examines the causes of these events in the US and their impacts on North America Europe Asia and Australia As with previous crises real estate booms and busts and excessive financial leverage played key roles however the most recent crisis had many unique aspects to it all of which are explored here in depth This includes the role played by large international banks shadow banks increased global liquidity population growth and other factors Collectively these factors contributed to interconnected economies and financial markets to an extent that never

existed before The net result was the unprecedented ripple effect of the crisis from the US and into the rest of the world The impact in the US was significantly different than the impact in Canada Japan Spain and other countries Significantly the global effects of the crisis varied widely from country to country as did government responses to the crisis The contributors to this book international academics bank regulators and practitioners critique the crises and important international regulatory issues from the point of view of various countries Academics regulators legislators and financial practitioners will do well to add this book to their shelves
