Due Diligence and Risk Assessment of an Alternative Investment Fund Ingrid Vancas, 2010-04 The aim of the book is to provide practical guidance for the investor when compiling due diligence and deciding on an investment or against it The focus of the book lays on the risk assessment and due diligence It captures fund's internal and external risks and the investment style specific risks The aim is to provide sound guidance to the alternative investment fund selection The UCITS 3 directive widens investment tools for the traditional asset managers by allowing short selling of securities and diminishing the gap between the traditional and the alternative asset management industry and attracting traditional managers to the alternative investment universe The author concentrates on three categories Relative Value and Market Neutral Event Driven and Opportunistic alternative investment funds Whilst the industry is generally categorized into certain fund types it has to be stated that every fund is different and will have different risk attributes Within the specific categories major risks will be the same as the exposure towards the specific underlying will be similar Still every single fund has to be examined on its own in detail as it will have the specific alpha generating competitive advantage Thus the author suggests a pre selection of the potential fund manager or the management team by analysing the team and the fund's performance first The analysis goes through the quantitative figures and the qualities of the management team Detailed knowledge about the strategies and its fit into the portfolio is worthless unless the investor is able to select the performing manager Without that skill the probability of ending up with an underperforming alternative investment fund or a blow up is huge The analysis of the management team qualities shows behaviour patterns helping to detect management teams which are tending towards moral hazard Secondly the alternative investment fund style specific risks are examined The author gives an overview

Alternative Beta Strategies and Hedge Fund Replication Lars Jaeger, Jeffrey Pease, 2008-10-13 There's a buzzword that has quickly captured the imagination of product providers and investors alike hedge fund replication In the broadest sense replicating hedge fund strategies means replicating their return sources and corresponding risk exposures However there still lacks a coherent picture on what hedge fund replication means in practice what its premises are how to distinguish different approaches and where this can lead us to Serving as a handbook for replicating the returns of hedge funds at

considerably lower cost Alternative Beta Strategies and Hedge Fund Replication provides a unique focus on replication explaining along the way the return sources of hedge funds and their systematic risks that make replication possible It explains the background to the new discussion on hedge fund replication and how to derive the returns of many hedge fund strategies at much lower cost it differentiates the various underlying approaches and explains how hedge fund replication can improve your own investment process into hedge funds Written by the well known Hedge Fund expert and author Lars Jaeger the book is divided into three sections Hedge Fund Background Return Sources and Replication Techniques Section one provides a short course in what hedge funds actually are and how they operate arming the reader with the background knowledge required for the rest of the book Section two illuminates the sources from which hedge funds derive their returns and shows that the majority of hedge fund returns derive from systematic risk exposure rather than manager Alpha Section three presents various approaches to replicating hedge fund returns by presenting the first and second generation of hedge fund replication products points out the pitfalls and strengths of the various approaches and illustrates the mathematical concepts that underlie them With hedge fund replication going mainstream this book provides clear guidance on the topic to maximise returns
