Viral Challenge 2025:

Sustainability as a Trend for Competitiveness Challenges Mihaela Ștefănescu, 2019-08-12 Defining a future development pathway through the lens of sustainability and competitiveness is a unique trademark of any free market. Going beyond this aspect, this book is an invitation to identify relevant correlations between the circular economy, trade adaptation to climate change, land degradation neutrality, fair trade, corporate social responsibility, culture, and gender. Among all of these sectors, we are currently witnessing various types of synergies. The key is to distinguish those adaptive solutions which are applicable to real-time changes. This volume scrutinizes the role played by the sustainability agenda in international negotiations and proposes new perspectives on sustainable management. Through all its chapters, the book focuses on the possibilities to broaden our perspectives when defining policy recommendations. Host Genetics in Viral Pathogenesis and Controls Ping An, Ju-Tao Guo, Cheryl Ann Winkler, 2019-12-31 **Viral Diseases and One Health in Africa** Juliet Adamma Shenge, Akebe Luther King Abia, 2025-12-25 Viral diseases continue to be a public health threat to humans. Humanity has been affected over the years by several pandemics associated with viruses, the most recent being COVID-19 caused by Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2). While these pandemics affect humanity globally, low and middle income countries are usually the most affected, especially those in Africa. The African continent, especially the sub-Saharan part, represents a unique and complex environmental, economic, health system, and socio-political landscape which has favored the emergence, re-emergence, survival, and spread of viral infections. Most of these countries are characterized by poor sanitation conditions at times with a complete lack of sanitary facilities and access to potable water for personal and household hygiene. Furthermore, most health systems in these countries are weak, usually due to a lack of finances and political will to invest in them. Moreover, social and cultural practices that allow constant interaction between humans, animals, and their environment increase the chances of infection. The recent COVID-19 pandemic challenged health systems worldwide, even in developed countries, prompting the need to develop early warning systems to monitor present pandemics and prevent the emergence of new ones or the re-emergence of once forgotten ones. Therefore, understanding the dynamics of viral disease emergence in the African continent is paramount to protecting the population from future epidemics and pandemics. This book features a collection of research on various emerging and re-emerging viral agents emanating from Africa, which may involve new variants of known viruses or completely new agents, their peculiarities, including their biology, pathogenesis, and mechanisms of adaptation in the environment, the role of climate change in disease emergence, drivers of zoonoses, and transmission of these viral diseases between human and animal hosts, existing infrastructure, including detection and diagnostic tools, health systems, and mitigators of viral diseases, challenges of implementing early warning systems and surveillance for viral disease outbreaks in Africa, the impact of viral infections on the continent's economy and the psychosocial impacts on its populations, and integrating the One Health approach to preventing disease outbreaks.
