Population Regulation And Dynamics:

Bibliography on the Control and Management of the Coyote and Related Canids with Selected References on Animal Physiology, Behaviour, Control Methods and Reproduction E. H. Dolnick, R. L. Medford, R. J. Schied, 1976 **Ökologie**

Thomas M. Smith, Robert Leo Smith, 2009 Populations ecosystems species interactions community *The Ecological World View* Charles J. Krebs, 2008-04-02 Filled with many examples of topic issues and current events this book develops a basic understanding of how the natural world works and of how humans interact with the planet's natural ecosystems It covers the history of ecology and describes the general approaches of the scientific method then takes a look at basic principles of population dynamics and applies them to everyday practical problems Handbook of Biological Control T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control *Population Regulation and Dynamics* Michael Patrick Hassell, Robert McCredie May, 1990 Papers surveying recent advances in studies of questions of population regulation and dynamics emphasizing the integration of empirical studies with ecological theory Overall the book has the aim of shaping an agenda for research towards an understanding of how many species there are and why Biological Control C. Huffaker, 2013-03-09 The explosive increase in the world's human population with consequent need to feed an ever increasing number of hungry mouths and the largely resultant disturbances and pollution of the environment in which man must live and produce the things he needs are forcing him to search for means of solving the first problem without intensifying the latter Food production requires adequate assurance against the ravages of insects In the last three decades short sighted unilateral and almost exclusive employment of synthesized chemicals for insect pest control has posed an enormous and as yet unfathomed contribution to the degradation of our environment while our insect pest problems seem greater than ever Properly viewed pest control is basically a question of applied ecology yet its practice has long been conducted with little regard to real necessity for control and in some cases with little regard to various detrimental side effects or long term advantage with respect even to the specific crop itself This book deals fundamentally with these questions The development of pesticide resistance in many of the target species against which the pesticides are directed has occasioned an ever increasing load of applications and complexes of different kinds of highly toxic materials This has been made even more necessary as the destruction of natural enemies has resulted as a side effect in the rise to pest status of many species that were formerly innocuous The application of broad spectrum pesticides thus has many serious and self defeating features **Population, Regulation and Dynamics** M. P. Hassel, 1990

Population, Regulation and Dynamics Robert McCredie May, Royal Society (Great Britain), 1990 **Wildlife Research**, 2010 **Ecology, Environmental Science & Conservation** Singh J.S., Singh S.P. & Gupta S.R., 2014 Over the years the scope of our scientific understanding and technical skills in ecology and environmental science have widened significantly with increasingly greater emphasis on societal issues In this book an attempt has been made to give basic concepts of ecology environmental science and various aspects of natural resource conservation The topics covered primarily deal with environmental factors affecting organisms adaptations biogeography ecology of species populations and species interactions biotic communities and ecosystems environmental pollution stresses caused by toxics global environmental change exotic species invasion conservation of biodiversity ecological restoration impact assessment application of remote sensing and geographical information system for analysis and management of natural resources and approaches of ecological economics The main issues have been discussed within the framework of sustainability considering humans as part of ecosystems and recognising that sustainable development requires integration of ecology with social sciences for policy formulation and implementation **Ecology**, 1995 *Dynamics of Large Mammal Populations* Tim Denis Smith, 1981 Collection of 23 original papers on the population dynamics of large mammals including ones on fur seals harp seals bears whales etc The chapters facilitate comparison of the population dynamics of various groups including herbivores carnivores ungulates cetaceans and pinnipeds **Population, Regulation, and Dynamics** Michael Patrick Hassell, Robert McCredie May, 1990 **Ecology Abstracts**, 1995 **Femtochemistry and Femtobiology** Monique M. Martin, James T. Hynes, 2004-04-16 This book reflects the heights of knowledge of ultrafast chemical processes attained in these early years of the 21st century the latest research in femtosecond and picosecond molecular processes in Chemistry and Biology carried out around the world is described here in more than 110 articles The results were presented and discussed at the VIth International Conference on Femtochemistry in Paris France from July 6 to July 10 2003 The articles published here were reviewed by referees selected from specialists in the Femtochemistry community guaranteeing a collective responsibility for the quality of the research reported in the next 564 pages Femtochemistry is an ever growing field where new research areas are constantly opening up and one which both stimulates and accompanies the development of ultrafast technologies The increasing interest in femtobiology and chemistry at the frontier with biology is an obvious indicator of the present impact of life sciences in our society New materials and reactions at surfaces are also some of the relatively new topics that promise rapid developments New methodologies and technologies for probing and following in real time molecular dynamical phenomena have appeared within the last ten years or so These methods based on multidimensional IR spectroscopies ultrafast X ray and electron diffraction techniques are well represented in this book Of ever improving performance they are now applied to the characterization of structural dynamics of an increasing number of chemical and biological systems This book reports the state of research in Femtochemistry and Femtobiology presented at Paris at the Maison de la Chimie in July 2003

representing the tenth anniversary of the conference Overview of the most recent research on ultrafast events Application of new methodologies on chemical and biological systems Contributions by key players in the field *Population Dynamics*
Naomi Cappuccino, Peter W. Price, 1995-09-01 An understanding of the dynamics of populations is critically important to ecologists evolutionary biologists wildlife managers foresters and many other biologists This edited treatise brings together the latest research on how populations fluctuate in size the factors that drive these changes and the theories explaining how populations are regulated The book also includes specific chapters dealing with insects of economic importance

Encyclopedia of Medical Anthropology Carol R. Ember, Melvin Ember, 2003-12-31 Medical practitioners and the ordinary citizen are becoming more aware that we need to understand cultural variation in medical belief and practice The more we know how health and disease are managed in different cultures the more we can recognize what is culture bound in our own medical belief and practice The Encyclopedia of Medical Anthropology is unique because it is the first reference work to describe the cultural practices relevant to health in the world s cultures and to provide an overview of important topics in medical anthropology No other single reference work comes close to matching the depth and breadth of information on the varying cultural background of health and illness around the world More than 100 experts anthropologists and other social scientists have contributed their firsthand experience of medical cultures from around the world Comprehensive
