Perturbation Techniques For Flexible Manipulators:

Perturbation Techniques for Flexible Manipulators Anthony R. Fraser, Ronald Daniel, 1991-06-30 A manipulator or robot consists of a series of bodies links connected by joints to form a spatial mechanism Usually the links are connected serially to form an open chain The joints are either revolute rotary or prismatic telescopic various combinations of the two giving a wide variety of possible configurations Motive power is provided by pneumatic hydraulic or electrical actuation of the joints The robot arm is distinguished from other active spatial mechanisms by its reprogrammability Therefore the controller is integral to any description of the arm In contrast with many other controlled processes e.g batch reactors it is possible to model the dynamics of a manipulator very accurately Unfortunately for practical arm designs the resulting models are complex and a considerable amount of research effort has gone into improving their numerical efficiency with a view to real time solution 32 41 51 61 77 87 91 In recent years improvements in electric motor technology coupled with new designs such as direct drive arms have led to a rapid increase in the speed and load carrying capabilities of manipulators However this has meant that the flexibility of the nominally rigid links has become increasingly significant Present generation manipulators are limited to a load carrying capacity of typically 5-10% of their own weight by the requirement of rigidity For example the Cincinnati Milicron T3R3 robot weighs more than 1800 kg but has a maximum payload capacity of 23 kg

Robust Control Algorithms for Flexible Manipulators Kshetrimayum Lochan, Binoy Krishna Roy, Bidyadhar Subudhi, Santhakumar Mohan, 2024-10-13 Various modelling and control of two link flexible manipulators are presented in this book The lumped parameter modelling method and the assumed modes method modelling are comprehensively reviewed The book also reviews the trajectory tracking problem and tip trajectory tracking problem along with the suppression of tip deflection of the links An exponential time varying signal and a chaotic signal are considered as the desired trajectories The identical non identical slave manipulator is synchronised with the controlled master manipulator so that the slave manipulator indirectly follows the desired manipulator *Flexible Manipulators* Yanqing Gao, Fei-Yue Wang, Zhi-Quan Zhao, 2012-04-12

The Intelligent Systems Series comprises titles that present state of the art knowledge and the latest advances in intelligent systems Its scope includes theoretical studies design methods and real world implementations and applications Flexible manipulators play a critical role in applications in a diverse range of fields such as construction automation environmental applications and space engineering Due to the complexity of the link deformation and dynamics the research effort on accurate modeling and high performance control of flexible manipulators has increased dramatically in recent years This book presents analysis data and insights that will of particular use for researchers and engineers working on the optimization and control of robotic manipulators and automation
