Perturbations of Positive Semigroups with

Applications Jacek Banasiak,Luisa Arlotti,2009-10-12 This book deals mainly with modelling systems that change with time The evolution equations that it describes can be found in a number of application areas such as kinetics fragmentation theory and mathematical biology This will be the first self contained account of the area *Perturbations of Positive Semigroups*

with Applications Jacek Banasiak,Luisa Arlotti,2006-02-02 Perturbations of Positive Semigroups with Applications is a self contained introduction to semigroup theory with emphasis on positive semigroups on Banach lattices and perturbation techniques The first part of the book presents a survey of the results that are needed for the second applied part of the book worked examples are provided to help absorb the theoretical material The second part then deals with the application of the developed theory to a variety of problems ranging from the classical birth and death type problems of population dynamics through fragmentation models in both conservative and mass loss regimes to kinetic models The only prerequisites are a basic knowledge of functional analysis and measure theory This is an essential one stop reference for graduate and postgraduate students and researchers in applied analysis and mathematical physics who are interested in the application of functional analytic techniques to concrete problems arising in physics biology and engineering **Evolutionary Equations**

with Applications in Natural Sciences Jacek Banasiak,Mustapha Mokhtar-Kharroubi,2014-11-07 With the unifying theme of abstract evolutionary equations both linear and nonlinear in a complex environment the book presents a multidisciplinary blend of topics spanning the fields of theoretical and applied functional analysis partial differential equations probability theory and numerical analysis applied to various models coming from theoretical physics biology engineering and complexity theory Truly unique features of the book are the first simultaneous presentation of two complementary approaches to fragmentation and coagulation problems by weak compactness methods and by using semigroup techniques comprehensive exposition of probabilistic methods of analysis of long term dynamics of dynamical systems semigroup analysis of biological problems and cutting edge pattern formation theory The book will appeal to postgraduate students and researchers specializing in applications of mathematics to problems arising in natural sciences and engineering **Multiscale**

Problems in the Life Sciences Jacek Banasiak,Jacek Miekisz,2008-05-30 The aim of this volume that presents lectures given at a joint CIME and Banach Center Summer School is to offer a broad presentation of a class of updated methods providing a mathematical framework for the development of a hierarchy of models of complex systems in the natural sciences with a special attention to biology and medicine Mastering complexity implies sharing different tools requiring much higher level of communication between different mathematical and scientific schools for solving classes of problems of the same nature Today more than ever one of the most important challenges derives from the need to bridge parts of a system evolving at different time and space scales especially with respect to computational affordability As a result the content has a rather

general character the main role is played by stochastic processes positive semigroups asymptotic analysis kinetic theory continuum theory and game theory **Mathematical Topics in Neutron Transport Theory** M. Mokhtar-Kharroubi,1997 This book presents some recent mathematical developments about neutron transport equations Several different topics are dealt with including regularity of velocity averages spectral analysis of transport operators inverse problems nonlinear problems arising in the stochastic theory of neutron chain fissions compactness properties of perturbed of 0 semigroups in Banach spaces with applications to transport theory Miyadera perturbations of c_0 semigroups in Banach spaces with applications to singular transport equations a thorough analysis of the leading eigenelements of transport operators and their approximation scattering theory Besides the new problems addressed in this book a unification and extension of the classical spectral analysis of neutron transport equations is given **Semigroups of Linear Operators and Applications** Jerome A. Goldstein,2017-05-17 Advanced graduate level treatment of semigroup theory explores semigroups of linear operators and linear Cauchy problems The text features challenging exercises and emphasizes motivation heuristics and further applications 1985 edition **Mathematical Reviews** ,2007 **Discrete and Continuous Dynamical Systems** ,2002 **Annales Polonici Mathematici** ,2008 **Advances in Mathematical Sciences and Applications** ,2000 Rendiconti Dell'Istituto Di Matematica Dell'Università Di Trieste ,1996 **The Mathematical Theory of Selection, Recombination, and Mutation** R. Bürger,2000-11-02 It is close to being a masterpiece could well be the classic presentation of the area Warren J Ewens University of Pennsylvania USA Population genetics is concerned with the study of the genetic ecological and evolutionary factors that influence and change the genetic composition of populations The emphasis here is on models that have a direct bearing on evolutionary quantitative genetics Applications concerning the maintenance of genetic variation in quantitative traits and their dynamics under selection are treated in detail Provides a unified self contained and in depth study of the theory of multilocus systems Introduces the basic population genetic models Explores the dynamical and equilibrium properties of the distribution of quantitative traits under selection Summarizes important results from more demanding sections in a comprehensible way Employs a clear and logical presentation style Following an introduction to elementary population genetics and discussion of the general theory of selection at two or more loci the author considers a number of mutation selection models and derives the dynamical equations for polygenic traits under general selective regimes The final chapters are concerned with the maintenance of quantitative genetic variation the response to directional selection the evolutionary role of deleterious mutations and other topics Graduate students and researchers in population genetics evolutionary theory and biomathematics will benefit from the in depth coverage This text will make an excellent reference volume for the fields of quantitative genetics population and theoretical biology **Existence Families, Functional Calculi and Evolution Equations** Ralph DeLaubenfels,1994-03-28 This book presents an operator theoretic approach to ill posed evolution equations It presents the basic theory and the more surprising examples

of generalizations of strongly continuous semigroups known as existent families and regularized semigroups These families of operators may be used either to produce all initial data for which a solution in the original space exists or to construct a maximal subspace on which the problem is well posed Regularized semigroups are also used to construct functional or operational calculi for unbounded operators The book takes an intuitive and constructive approach by emphasizing the interaction between functional calculus constructions and evolution equations One thinks of a semigroup generated by A as e^{tA} and thinks of a regularized semigroup generated by A as $e^{tA} g(A)$ producing solutions of the abstract Cauchy problem for initial data in the image of $g(A)$ Material that is scattered throughout numerous papers is brought together and presented in a fresh organized way together with a great deal of new material **Advances in Applied Probability**, 1996

Differential and Integral Equations, 2002 Seminar Notes in Functional Analysis and Partial Differential Equations, 1993 **Труды Математического института имени В.А. Стеклова**, 1994 *Mathematical Modelling of Population Dynamics* Ryszard Rudnicki, 2004 *The Rocky Mountain Journal of Mathematics*, 2009
