

# What is IPM?

Integrated Pest Management (IPM) is an **ecosystem-based strategy** that focuses on long-term prevention of pests or their damage through a combination of appropriate control tactics.

An IPM program proactively seeks to determine and correct the cause of a pest problem while also minimizing risks to human health and the environment.

## 3. Monitor and assess

Is the pest present? Where is the pest located? How abundant is the pest? What is the severity of damage? When is the best time to implement a pest control tactic? How effective were pest control efforts?

## 4. Determine a threshold for action

If preventative measures fail, assess damage and set a threshold for when to initiate a control measure. Think of a threshold as a tolerance level: is the pest population and its damage tolerable in your garden, lawn, or home?

## 5. Use a combination of appropriate control methods

Control methods might include cultural controls, mechanical/physical control, biological control, and chemical control.

## 6. Evaluate results

There is seldom a single correct solution to a pest problem. Regular monitoring will help you to determine how well you are meeting your pest management goals and if changes are needed.

## 1. Identify

Is what you are seeing actually a pest? Do not treat an organism as a pest until it has proven to be one. Your Virginia Cooperative Extension Office can help you correctly ID pests.

## 2. Prevent

Create a healthy, growing environment that limits the introduction of pests and their ability to reproduce, develop, and spread. For example, choose resistant cultivars, remove infested debris, and select plants suited for your conditions.
