Human Toxicology of Pesticides Fina P. Kaloyanova,M. A. El Batawi,2019-06-04 First Published in 1991 this book conducts a systematic analysis of existing information regarding the toxicological effects of pesticides on humans The book identifies the negative health effects related to exposure to pesticides and the biological changes required to undertake biological monitoring The book also discusses the importance and magnitude of the problem for different kinds of pesticide applications in different parts of the world explains the toxicodynamics and clinical picture of acute and chronic intoxications resulting from exposure to different groups of pesticides and selected individual substances and evaluates existing methods and limitations for assessing human exposure to pesticides Pesticide manufacturers occupational health professionals epidemiologists environmentalists government agencies and others concerned with the effects of pesticides on human populations should consider this book essential reading      Public Health Impact of Pesticides Used in Agriculture World Health Organization,1990 Production and use of pesticides Toxic effects of pesticides Short and long term health effects of

pesticides epidemiological data Populations at risk Public health impact Prevention of pesticide poisoning      **Seeing Nature Through Gender** Virginia Scharff, 2003 Environmental history has traditionally told the story of Man and Nature. Scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender. Seeing Nature through Gender here reintroduces gender as a meaningful category of analysis for environmental history, showing how women's actions, desires, and choices have shaped the world and seeing men as gendered actors as well. In thirteen essays that show how gendered ideas have shaped the ways in which people have represented, experienced, and consumed their world, Virginia Scharff and her coauthors explore interactions between gender and environment in history. Ranging from colonial borderlands to transnational boundaries, from mountaintop to marketplace, they focus on historical representations of humans and nature, on questions about consumption, on environmental politics, and on the complex reciprocal relations among human bodies and changing landscapes. They also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies. Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly, often with dire consequences for other people and organisms. Here are considerations of the ways we study sexuality among birds of William Byrd's masking sexual encounters in his account of an eighteenth-century expedition; of how the ecology of fire in a changing built environment has reshaped firefighters' own gendered identities. Some are playful, as in a piece on the evolution of snow bunnies to shred bunnies. Others are dead serious, as in a chilling portrait of how endocrine disruptors are reinventing humans, animals, and water systems from the cellular level out. Aiding and adding significantly to the enterprise of environmental history, Seeing Nature through Gender bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we've engraved on ourselves and on the planet.      *The Effects of Pesticides on Human Health* Scott R. Baker, Christopher Foster Wilkinson, 1990 Pesticides are developed specifically for their ability to interact, interfere with a variety of biological targets. Because of the fundamental similarities of organisms at the subcellular level, selectivity is often difficult to achieve, and unanticipated pesticide actions leading to a number of adverse health effects may result. Some occupational exposure to pesticides is unavoidable, even with strict adherence to good agricultural practices, proper application procedures. This book, presenting the results of a 1988 workshop focusing on the potential chronic health effects of pesticides, addresses the topics of pesticide exposure, neurotoxicity, carcinogenicity, immunotoxicity, developmental toxicity, reproductive toxicity. Pesticides discussed include organochlorine insecticides, DDT, its derivatives, hexachlorocyclohexanes, cyclodienes, chlordecone, anticholinesterase insecticides, organophosphorus esters, carbamates, pyrethrins, pyrethroid insecticides, herbicides, fungicides, fumigants. A valuable source of information for biological chemists, toxicologists, pathologists, pharmacists, regulatory officials, environmentalists, governmental state scientists, attorneys, managers, biomedical scientists.      *American Journal of Public Health and the Nation's Health*, 1968      Analysis of
