Advanced Wireless Communications

Savo G. Glisic, 2007-06-13 Fully revised and updated version of the successful Advanced Wireless Communications. Wireless communications continue to attract the attention of both research community and industry. Since the first edition was published, significant research and industry activities have brought the fourth generation 4G of wireless communications systems closer to implementation and standardization. Advanced Wireless Communications continues to provide a comparative study of enabling technologies for 4G. This second edition has been revised and updated and now includes additional information on the components of common air interface including the area of space time coding, multicarrier modulation, especially OFDM, MIMO, cognitive radio, and cooperative transmission. Ideal for students and engineers in research and development in the field of wireless communications, the second edition of Advanced Wireless Communications also gives an understanding of current approaches for engineers in telecom operators, government, and regulatory institutions. New features include: Brand new chapter covering linear precoding in MIMO channels based on convex optimization theory. Material based on game theory modelling encompassing problems of adjacent cell interference, flexible spectrum sharing, and cooperation between the nodes in ad hoc networks. Presents and discusses the latest schemes for interference suppression in ultra wide band UWB cognitive systems. Discusses the cooperative transmission and more details on positioning.
