ABSTRACT

Disparities in nutrition, such as poor diet quality and inadequate nutrient intake, arise from multiple factors and are related to adverse health outcomes such as obesity, diabetes, cardiovascular disease, and some cancers. The aim of the current perspective is to present a nutrition-centric socioecological framework that delineates determinants and factors that contribute to diet and nutrition-related disparities among disadvantaged populations. The Nutrition Health Disparities Framework (NHDF) describes the domains (biological, behavioral, physical/built environment, sociocultural environment, and healthcare system) that influence nutrition-related health disparities through the lens of each level of influence (that is, individual, interpersonal, community, and societal). On the basis of the scientific literature, the authors engaged in consensus decision making in selecting nutrition-related determinants of health within each domain and socioecological level when creating the NHDF. The framework identifies how neighborhood food availability and access (individual/built environment) intersect with cultural norms and practices (interpersonal/sociocultural environment) to influence dietary behaviors, exposures, and risk of diet-related diseases. In addition, the NHDF shows how factors such as genetic predisposition (individual/biology), family dietary practices (interpersonal/behavioral), and food marketing policies (societal) may impact the consumption of unhealthy foods and beverages and increase chronic disease risk. Family and peer norms (interpersonal/behavior) related to breastfeeding and early childhood nutrition interact with resource-poor environments such as lack of access to preventive healthcare settings (societal/healthcare system) and low usage of federal nutrition programs (societal/behavioral), which may increase risk of poor nutrition during childhood and food insecurity. The NHDF describes the synergistic interrelationships among factors at different levels of the socioecological model that influence nutrition-related outcomes and exacerbate health disparities. The framework is a useful resource for nutrition researchers, practitioners, food industry leaders, and policymakers interested in improving diet-related health outcomes and promoting health equity in diverse populations.

Keywords: Nutrition Health Disparities Framework, social determinants of health, socioecological model, diet quality, health equity

Statement of Significance

There is a critical need to address nutrition health disparities and reduce chronic disease risk. This perspective proposes the Nutrition Health Disparities Framework to examine synergistic interrelationships across levels of influence that impact nutrition health disparities. The framework can inform the development of multilevel nutrition interventions to improve health equity in diverse populations.

Bioactive Peptides Richard Owusu-Apenten, 2010-06-23 Bioactive peptides are used to enhance the body's antioxidant status, antiseptic capacity, immune function, anti-inflammatory capacity, mineral absorption, and appetite. They can also mitigate major metabolic derangements arising from chronic illnesses which result in unwanted weight loss. Presenting data from human studies, clinical trials, and recent research findings, this work summarizes the applications and benefits of this therapy. The book covers host response, quality factors, protein, economics, and muscle loss. It includes case studies on aging, AIDS, COPD, diabetes, inflammatory bowel disease, kidney failure, and tuberculosis. *Environmental Health Perspectives*, 1993

Nutritional Impact Laura Anderson, AI, 2025-03-17 Nutritional Impact explores the profound connection between nutrition and reproductive and sexual health, emphasizing how dietary choices significantly impact fertility, hormonal balance, and overall sexual function. It highlights that what we eat can either support or undermine long-term well-being in these critical areas. For instance, the book examines how specific nutrients affect reproductive hormone balance and how tailored dietary strategies can enhance fertility for both men and women, addressing the increasing prevalence of hormonal imbalances and sexual dysfunction often linked to nutritional deficiencies. The book begins by laying the groundwork with fundamental concepts of nutrition and reproductive biology, then systematically examines the effects of macronutrients (proteins, fats, and carbohydrates) and micronutrients (vitamins and minerals) on hormonal balance and reproductive function. Later chapters delve into specific dietary strategies for enhancing fertility, managing hormonal disorders, and addressing sexual health concerns. The book culminates with practical guidelines, including meal plans and recipes, to aid in implementing a fertility-enhancing diet and lifestyle. This approach provides readers with accessible, evidence-based information to make informed decisions about their diet and proactively improve their health. Soil Nutrient Balance at Different Spatial Scales: Examining Soil Fertility Management and Sustainability of Mixed Farming Systems in Ethiopia Amare Hailelassie Tekle, 2005-07-29 Soil nutrient balances are used as indicators of sustainability from the sum of nutrient inputs and outputs; it is possible to define agroecosystems as accrediting, balanced, or impoverished. The value of such approaches increases if nutrient balances are related to nutrient stocks in order to estimate the fraction used per cropping cycle to offset potentially negative balances. This thesis reports the results of nutrient balances and soil fertility management studies at different spatial scales: i.e., national, state, farming system, watershed, farm, and field. The overall goal was to examine soil fertility management and sustainability of smallholders' mixed farming systems in Ethiopia at different spatial scales using nutrient balances as an indicator.
