Perspectives On Environment And Behavior Theory Research And Applications:

Perspectives on Environment and Behavior Daniel Stokols, 2013-11-11 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California Irvine during the spring of 1974. These colloquia were held in conjunction with Social Ecology 252, a graduate seminar on Man and the Environment. Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques, they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research. The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior, a representation of its major concerns, and an analysis of its conceptual and empirical trends. Thus, expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology.

Environmental Psychology and Human Well-Being Ann Sloan Devlin, 2018-08-21 *Environmental Psychology and Human Well-Being: Effects of Built and Natural Settings* provides a better understanding of the way in which mental and physical well-being is affected by physical environments along with insights into how the design of these environments might be improved to support better health outcomes. The book reviews the history of the field, discusses theoretical constructs in guiding research and design, and provides an up-to-date survey of research findings. Core psychological constructs such as personal space, territoriality, privacy, resilience, stress, and more are integrated into each environment covered. Provides research-based insight into how an environment can impact mental and physical health and well-being. Integrates core psychological constructs such as coping, place attachment, social support, and perceived control into each environment discussed. Includes discussion of Kaplan's Attention Restoration Theory and Ulrich's Stress Reduction Theory. Covers educational settings, workplace settings, environments for active living, housing for the elderly, natural settings, correctional facilities, and more.

Environmental Simulation R.W. Marans, Daniel Stokols, 2013-06-29 This volume is intended to provide an overview and scholarly analysis of state-of-the-art developments within the field of environmental simulation research. Environmental simulation involves the presentation of scale model, previews, full-scale mock-ups, and computer images of planned environments and activities taking place within them to designers and to prospective users of those settings. Environmental simulations are undertaken for many purposes, including: 1) the training of environmental design students and professionals; 2) the assessment of people's environmental preferences; and 3) the incorporation of observers' assessments of simulated settings into the planning, design, and renovation of actual environments to maximize the degree of fit between occupants' needs and the arrangement of their physical surroundings. Environmental simulation research has expanded rapidly during the past two decades as the result of

increasing collaboration between behavioral and social scientists environmental designers and professional planners During this period alternative conceptual and methodological approaches to environmental simulation have emerged and numerous programs of simulation research have been initiated worldwide To date however no attempt has been made to present a comprehensive review and assessment of these research developments and an analysis of their implications for design and public policy Accordingly the major objectives of this volume are to provide an overview of key conceptual and methodological advances within the field of environmental simulation research and to place these diverse developments within a broader scientific and public policy context Ökologische Psychologie Lenelis Kruse, Carl Friedrich Graumann, Ernst-Dieter Lantermann, 1990 *Psychologically-based Informational Needs and Their Implications for Design* Deanna Lynn Craig, 1984
