Postimperative Negative Variation In Schizophrenic Patients And Healthy Subjects:

The Post-Imperative Negative Variation in Schizophrenic Patients and Healthy Subjects Christoph Klein (Ph. D.),1997 The Post Imperative Negative Variation PINV is an event related brain potential that has scarcely been investigated experimentally in schizophrenic patients Four consecutive experiments using a visual delayed matching to sample task show that the PINV Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen ,1996 **Quantitative EEG, Event-Related Potentials and Neurotherapy** Juri D. Kropotov,2010-07-28 While the brain is ruled to a large extent by chemical neurotransmitters it is also a bioelectric organ The collective study of Quantitative ElectroEncephaloGraphs QEEG the conversion of brainwaves to digital form to allow for comparison between neurologically normative and dysfunctional individuals Event Related Potentials ERPs electrophysiological response to stimulus and Neurotherapy the process of actually retraining brain processes to offers a window into brain physiology and function via computer and statistical analyses of traditional EEG patterns suggesting innovative approaches to the improvement of attention anxiety mood and behavior The volume provides detailed description of the various EEG rhythms and ERPs the conventional analytic methods such as spectral analysis and the emerging method utilizing QEEG and ERPs This research is then related back to practice and all existing approaches in the field of Neurotherapy conventional EEG based neurofeedback brain computer interface transcranial Direct Current Stimulation and Transcranial Magnetic Stimulation are covered in full While it does not offer the breadth provided by an edited work this volume does provide a level of depth and detail that a single author can deliver as well as giving readers insight into the personl theories of one of the preeminent leaders in the field Provide a holistic picture of quantitative EEG and event related potentials as a unified scientific field Present a unified description of the methods of quantitative EEG and event related potentials Give a scientifically based overview of existing approaches in the field of neurotherapy Provide practical information for the better understanding and treatment of disorders such as ADHD Schizophrenia Addiction OCD Depression and Alzheimer s Disease *The Post-imperative Negative Variation in Schizophrenic Patients and Healthy Subjects* Christoph Klein,1997 The Post Imperative Negative Variation PINV is an event related brain potential that has scarcely been investigated experimentally in schizophrenic patients Four consecutive experiments using a visual delayed matching to sample task show that the PINV 1 is sensitive to the ambiguity in the matching process both in schizophrenic patients and healthy subjects 2 is sensitive to the provisional memory load in schizophrenic patients only 3 is related to the experimentally induced motor response and 4 has a frontolateral topography that distinguishes schizophrenic patients and schizotypal subjects from healthy controls Taken together these results suggest that the prefrontal cortex or those cerebral structures functionally linked with it contribute to the rising of the PINV in schizophrenic patients **Bibliographie psychologischer Literatur aus den deutschsprachigen Ländern** ,1998 *EEG and Evoked Potentials in Psychiatry and Behavioral*
