Postmodern Philosophy and the Scientific Turn Dorothea E. Olkowski, 2012-04-23 A groundbreaking interdisciplinary approach to the study of consciousness Beautifully written engaging throughout and captivating Claire Colebrook The Pennsylvania State University What can come of a scientific engagement with postmodern philosophy Some scientists have claimed that the social sciences and humanities have nothing to contribute except perhaps peripherally to their research Dorothea E Olkowski shows that mathematics itself the historic link between science and philosophy plays a fundamental role in the development of the worldviews that drive both fields Focusing on language its usage and expression of worldview she develops a phenomenological account of human thought and action to explicate the role of philosophy in the sciences Olkowski proposes a model of phenomenology both scientific and philosophical that helps make sense of reality and composes an ethics for dealing with unpredictability in our world

Hypnosis Between Science and Magic Isabelle Stengers, 2024-11-14 What if judgment returned to the craft of magic How would that relieve the burdens of critique and realign its priorities These questions regarding the value of magic to thinking are at the very heart of the acclaimed philosopher of science Isabelle Stengers political and philosophical thought and her insistence that the smoke of the burned witches still hangs in our nostrils Now in the first English translation of this classic text *Hypnosis Between Science and Magic* provides an entry point to the work of Isabelle Stengers who has so originally and forcefully shifted how we think about the history of ideas The book focuses in on an area of her thought that has recurred throughout her career the presumed antagonism between magic and science and especially the evacuation of magic from all that is thought to be scientifically valid

Darwin's Psychology Ben Bradley, 2020-10-08 Darwin has long been hailed as forefather to behavioural science especially nowadays with the growing popularity of evolutionary psychologies Yet until now his contribution to the field of psychology has been somewhat understated This is the first book ever to examine the riches of what Darwin himself wrote about psychological matters It

unearths a Darwin new to contemporary science whose first concern is the agency of organisms from which he derives both his psychology and his theory of evolution A deep reading of Darwin s writings on climbing plants and babies blushing and bower birds worms and facial movements shows that for Darwin evolution does not explain everything about human action Group life and culture are also keys whether we discuss the dynamics of conscience or the dramas of desire Thus his treatment of facial actions sets out from the anatomy and physiology of human facial movements and shows how these gain meanings through their recognition by others A discussion of blushing extends his theory to the way reading others expressions rebounds on ourselves I care about how I think you read me This dynamic proves central to how Darwin understands sexual desire the production of conscience and of social standards through group dynamics and the role of culture in human agency Presenting a new Darwin to science and showing how widely Darwin s understanding of evolution and agency has been misunderstood and misrepresented in biology and the social sciences this important new book lights a new way forward for those who want to build psychology on the foundation of evolutionary biology **From Energy to**
