**Positive 1D and 2D Systems** Tadeusz Kaczorek, 2002 This text is devoted to the positive multivariable 1D and 2D linear time invariant finite dimensional system The book is based on the author's lectures for Ph D students delivered at Warsaw University of Technology in the academic year 1999 2000 The book consists of two parts the first part is devoted to the 1D positive linear systems and the second to the 2D positive linear systems described by the Rosser model and the Fornasini Marchesini models Definitions basic properties and theorems concerning positive matrices and graphs are presented the externally and internally positive linear continuous time and discrete time linear systems are considered and the reachability controllability and observability of positive linear systems are discussed The realisation problem for positive 1D and 2D systems is also considered and the 2D models of externally and internally positive and their properties and controllability and minimum energy control of positive 2D systems are investigated Positive Systems Filippo Cacace, Lorenzo Farina, Roberto Setola, Alfredo Germani, 2017-04-01 This book presents high quality original contributions on positive systems including topics such as monotone dynamical systems in mathematical biology and game theory mathematical developments for networked systems in biology chemistry and the social sciences linear and nonlinear positive operators dynamical analysis observation and control of positive distributed parameter systems stochastic realization theory biological systems with positive variables and positive controls iterated function systems nonnegative dynamic processes and dimensioning problems for collaborative systems The book comprises a selection of the best papers presented at the POSTA 2016 the 5th International Symposium on Positive Systems which was held in Rome Italy in September 2016 This conference series represents a targeted response to the growing need for research that reports on and critically discusses a wide range of topics concerning the theory and applications of positive systems *Selected Problems of Fractional Systems Theory* Tadeusz Kaczorek, 2011-05-10 This monograph covers some selected problems of positive fractional 1D and 2D linear systems It is an extended and modified English version of its preceding Polish edition published by Technical University of Bialystok in 2009 This book is based on the lectures delivered by the author to the Ph D students of the Faculty of Electrical Engineering of Bialystok University of Technology and of Warsaw University of Technology and on invited lectures in several foreign universities in the last three years Analysis and Design for Positive Stochastic Jump Systems Wenhai Qi, Guangdeng Zong, 2022-09-19 The book focuses on analysis and design for positive stochastic jump systems By using multiple linear co positive Lyapunov function method and linear programming technique a basic theoretical framework is formed toward the issues of analysis and design for positive stochastic jump systems This is achieved by providing an in depth study on several major topics such as stability time delay finite time control observer design filter design and fault detection for positive stochastic jump systems The comprehensive and systematic treatment of positive systems is one of the major features of the book which is particularly suited for readers who are interested to learn non negative theory By reading

this book the reader can obtain the most advanced analysis and design techniques for positive stochastic jump systems
