**Ocean Artificial Upwelling - Ecological Responses and Biogeochemical Impacts** Ulf Riebesell, Javier Arístegui, Nina Bednarsek, Angelique White, Ricardo Maria Letelier, 2024-09-20 Feeding a growing human population and achieving net zero CO<sub>2</sub> emissions by 2050 are the great challenges of the 21st century Whilst terrestrial resources are already utilized intensively by competing societal sectors the vast ocean ecosystems still hold untapped potential The productivity of the ocean is however limited by the transport of nutrient rich deep waters to the sun lit surface layer In large parts of the global ocean this transport is blocked by a temperature induced density gradient with warm light waters residing on top of heavier cold waters The upward transport of nutrient rich deep waters through artificial upwelling can break this blockade and enhance primary production However little is presently known about the ecological responses to forced upwelling in oligotrophic waters their impacts on biogeochemical cycling and possible feedbacks to the climate system In view of its potential contribution to securing marine food production and mitigating climate change a comprehensive assessment of the feasibility effectiveness and associated risks of artificial upwelling is of particular scientific and societal interest

explained The sections of the book start with general descriptions of techniques followed by illustrative examples It is divided into six sections Section 1 bioinformatics and genomics research Section 2 top down strategies where the researcher starts with the phenotype and then analyzes the associated genes bottom up strategies where the physiological chain leading to a phenotype is analyzed starting from the gene product Section 3 transgenic approaches in rodents including overexpressing foreign genes and gene targeting systemic manipulation approaches directly targeting the central nervous system and methods used with invertebrates Section 4 methods used to evaluate relevant behavioral phenotypes including learning and aggression Section 5 examples on molecular brain research in man Section 6 ethical aspects of research in this field
