**Science and International Environmental Policy** Radoslav S. Dimitrov, 2005-11-09 The proliferation of environmental agreements is a defining feature of modern international relations that has attracted considerable academic attention The cooperation literature focuses on stories of policy creation and ignores issue areas where policy agreements are absent Science and International Environmental Policy introduces nonregimes into the study of global governance and compares successes with failures in the formation of environmental treaties By exploring collective decisions not to cooperate it explains why international institutions form but also why when and how they do not emerge The book is a structured comparison of global policy responses to four ecological problems deforestation coral reefs degradation ozone depletion and acid rain It explores the connection between knowledge and action in world politics by investigating the role of scientific information in environmental management The study shows that different types of expert information play uneven roles in policymaking Extensive analysis of multilateral scientific assessments participatory observation of negotiations and interviews with policymakers and scientists reveal that some kinds of information are critical requirements for policy creation while other types are less influential Moreover the state of knowledge on ecological problems is not a function of sociopolitical power By disaggregating the concept of knowledge the book solves contradictions in previous theoretical work and offers a compelling account of the interplay between knowledge interests and power in global environmental politics

Science and International Environmental Policy Radoslav Dimitrov, 2006 The proliferation of environmental agreements is a defining feature of modern international relations that has attracted considerable academic attention The cooperation literature focuses on stories of policy creation and ignores issue areas where policy agreements are absent Science and International Environmental Policy introduces nonregimes into the study of global governance and compares successes with failures in the formation of environmental treaties By exploring collective decisions not to cooperate it explains why international institutions form but also why when and how they do not emerge The book is a structured comparison of global policy responses to four ecological problems deforestation coral reefs degradation ozone depletion and acid rain It explores the connection between knowledge and action in world politics by investigating the role of scientific information in environmental management The study shows that different types of expert information play uneven roles in policymaking Extensive analysis of multilateral scientific assessments participatory observation of negotiations and interviews with policymakers and scientists reveal that some kinds of information are critical requirements for policy creation while other types are less influential Moreover the state of knowledge on ecological problems is not a function of sociopolitical power By disaggregating the concept of knowledge the book solves contradictions in previous theoretical work and offers a compelling account of the interplay between knowledge interests and power in global environmental politics     *Essential Concepts of Global Environmental Governance* Jean-Frederic Morin, Amandine Orsini, 2014-07-11 Aligning global governance to the

challenges of sustainability is one of the most urgent environmental issues to be addressed This book is a timely and up to date compilation of the main pieces of the global environmental governance puzzle The book is comprised of 101 entries each defining a central concept in global environmental governance presenting its historical evolution introducing related debates and including key bibliographical references and further reading The entries combine analytical rigour with empirical description The book offers cutting edge analysis of the state of global environmental governance raises an up to date debate on global governance for sustainable development gives an in depth exploration of current international architecture of global environmental governance examines the interaction between environmental politics and other fields of governance such as trade development and security elaborates a critical review of the recent literature in global environmental governance This unique work synthesizes writing from an internationally diverse range of well known experts in the field of global environmental governance Innovative thinking and high profile expertise come together to create a volume that is accessible to students scholars and practitioners alike

**The Handbook of Transnational Governance** Thomas Hale, David Held, 2018-02-12 When we speak of global governance today we no longer mean simply state to state diplomacy international treaties or intergovernmental organizations like the United Nations Alongside these traditional elements of global politics are a host of new institutions ranging from global networks of governmental officials to private codes of conduct for corporations to action oriented partnerships of NGOs governments corporations and other actors These innovative mechanisms offer intriguing solutions to pressing transnational challenges as diverse as climate change financial governance workers rights and public health But they also raise new questions about the effectiveness and legitimacy of transnational governance An expanding body of scholarship has sought to identify and assess these new forms of governance but this young body of work has lacked a sense of the larger picture This volume seeks to fill that need by presenting a comprehensive overview of new forms of transnational governance This resource is essential for those who want to explain why transborder governance has changed and to understand what implications these changes have for global politics

**Ecoregionalism** Jon Marco Church, 2020-05-25 This book provides a comprehensive understanding of environmental regionalism at the international level analyzing the concept and identifying recurring patterns from six in depth case studies While ecoregions or environmental regions are defined on ecological boundaries rather than administrative criteria ecoregionalism is the idea that regional dynamics should cluster around ecoregions while ecoregionalization is the tendency of regional dynamics to cluster around ecoregions Focusing on the international level this book presents six cases of ecoregional processes from around the world and the regional environmental agreements two are terrestrial the Alps and the Andes two are marine the Mediterranean Sea and the Baltic Sea two are related to freshwater ecosystems the Amu Darya in Central Asia and the Great Lakes in North America The book analyzes both ecoregional processes focused on the environment as well as intersectoral ecoregional processes The case studies are analyzed based on the ecoregional

governance framework developed by the author for this book Despite the diversity of context the similarity of the governance system of the six cases is striking Several recurring patterns have been identified which may also extend to the subnational level They are not design principles but may be taken into consideration for the design or redesign of current and future regional environmental agreements and processes This book will be of great interest to students and scholars of environmental politics natural resource management spatial planning and international relations **The Social**

**Construction of Climate Change** Mary E. Pettenger, 2016-02-24 Individuals international organizations and states are calling for the world to confront climate change Efforts such as the Kyoto Protocol have produced intractable disputes and are deemed inadequate This volume adopts two constructivist perspectives norm centred and discourse to explore the social construction of climate change from a broad theoretical level to particular cases The contributors contend that climate change must be understood from the context of social settings and that we ignore at our peril how power and knowledge structures are generated They offer a greater understanding of why current efforts to mitigate climate change have failed and provide academics and policy makers with a new understanding of this important topic *Governance of Earth Systems* Robert Boardman, 2010-07-07 Science and politics are closely connected in today's global environmental issues This book focuses on these links in relation to climate change the threats to wildlife species and natural hazards and disasters Close study of these links of these reveals the need for more effective international cooperation and the limits of global governance
