Science And The Media:

Science and the Media Donald Kennedy, Geneva Overholser, 2010 How science and technology are covered by the media is a central factor in scientific illiteracy Journalists value timeliness speed simplicity and clarity Yet stories about science and technology may be long building complex and without dramatic time pegged events The need to grab and hold attention to write tight stories or produce short segments can come at the cost of context and nuance One observer noting journalism s preference for attention grabbing conflict driven events has joked that reporters two thousand years ago would have covered the heck out of the crucifixion and missed Christianity As the world grows more complex there is an increasing need for citizens to understand the scientific and technological dimensions of daily news events Journalists play a critical role in helping readers listeners and viewers appreciate the science underlying major policy choices And scientists in turn must effectively communicate to the public especially through the media We hope that the essays gathered in this volume will generate a broader understanding of the intertwined roles of the media and the scientific and technical community in helping to ensure a well informed public

Martin W. Bauer, Massimiano Bucchi, 2008-07-25 Analyzing the role of journalists in science communication this book presents a perspective on how this is going to evolve in the twenty first century The book takes three distinct perspectives on this interesting subject Firstly science journalists reflect on their operating rules science news values and news making routines Secondly a brief history of science journalism puts things into context characterising the changing output of science writing in newspapers over time Finally the book invites several international journalists or communication scholars to comment on these observations thereby opening the global perspective This unique project will interest a range of readers including science communication students media studies scholars professionals working in science communication and journalists Science and the Media Massimiano Bucchi, 1998 **Popular Science** Hans Jürgen Krysmanski, Science and the Media Massimiano Bucchi, 2014-03-20 In the days of global warming and BSE science is increasingly a public issue This book provides a theoretical framework which allows us to understand why and how scientists address the general public The author develops the argument that turning to the public is not simply a response to inaccurate reporting by journalists or to public curiosity nor a wish to gain recognition and additional funding Rather it is a tactic to which the scientific community are pushed by certain internal crisis situations Bucchi examines three cases of scientists turning to the public the cold fusion case the COBE Big Bang issue and Louis Pasteur's public demonstration of the anthrax vaccine a historical case of public science Finally Bucchi presents his unique model of communications between science and the public carried out through the media This is a thoughtful and wide ranging treatment of complex contemporary issues touching upon the history and sociology of science communication and media studies Bucchi's theories on scientific communication in the media are a valuable contribution to the current debate on this subject Insights on Science Journalism Felicity Mellor, 2024-03-14 Bringing together experts from a range of disciplines this collection critically examines science journalism paying special attention to the points of tension that science journalists navigate in their work today Faced with the twin crises of climate change and a global pandemic science journalism has never before been so prominent This book showcases perspectives that transcend the particulars of the specific news events and outlets studied in order to provide an overview of the key areas of scholarly interest regarding the nature of science journalism The volume is organised into three sections the first provides historical case studies illustrating the demarcation of science journalism from science as science journalism emerged as a recognisable news beat in the twentieth century the second examines the relationship between science journalists and their sources particularly scientists and the mediation of this relationship through organisations foreign journalism and political constraints and the final section considers the style and voice of science journalism content Case studies and original empirical research are compiled from across the globe including the UK US Germany Vietnam and Russia and are synthesised to offer a readable and engaging insight into the beat Insights on Science Journalism is recommended reading
