Synthesizing Systems Anna Darden Copeland, 2007-02-22 The purpose of this dissertation is to introduce a general reading audience to the major themes found in the fiction of Richard Powers with an emphasis on his use of science For Powers science is something more than the accumulation of technical data and the proliferation of theories developed to explain physical phenomena It is an evolving body of knowledge which has important insights to contribute into the conditions which ground human experience The close and often detailed discussions of contemporary issues in science which Powers incorporates into his fiction indicate the extent to which he sees science as an inseparable component in any attempt to understand the complexities of human experience The common ground Powers uses to link the interests of science and those of fiction into a balanced if not always harmonious pursuit of truth is wonder The limitations placed on science during this century do not undermine the ability of science to influence what we can know Nor do these limitations diminish the ability of science to inspire wonder Quite the opposite For Powers the true wonder of the human intellect rests in our remarkable ability to balance observation and

interpretation What he discovers again and again in his fiction is that science like literature is a product of the human imagination a way to mediate between the world and our perceptions of it The recognition that science is a cultural practice a body of knowledge thoroughly imbued with the practices and prejudices of its historical surroundings is a necessary first step in mending the rift separating science and literature head and heart The greatest insight of twentieth century science may just be the recognition that there are other ways to access the truth Richard Powers skillful weaving of science and art is a testament that literature offers a unique vantage point from which we might learn something of value about ourselves and the world we inhabit

Descartes' Dream Philip J. Davis, Reuben Hersh, 2005-01-01 These provocative essays take a modern look at the 17th century thinker's dream examining the influences of mathematics on society particularly in light of technological advances They survey the conditions that elicit the application of mathematic principles the applications effectiveness and how applied mathematics transform perceptions of reality 1987 edition *Literarische Datenbanken* Manfred Kammer, 1995

**Annual Review of Information Science and Technology**, 1988 Index of Mathematical Papers, 1985 Writing Computer and Information History William Aspray, 2024-05-14 This is not a book about the history of computing or the history of information Instead it is a meta historical book about the research and writing of these types of history The formal presentation of historical research in the form of a publication often hides the process by which the topic was selected boundaries were drawn evidence was selected analytic approach was chosen and applied results were presented how this work fits into a larger body of scholarship the implicit goals and biases of the author and many other similar issues This process of learning about the various ways to carry out computer history or information

history can be enriched by this collection of reflective essays by experienced scholars discussing the craft that they practice. This is a book that concerns both computer history and information history. The first scholarship in computer history by professionally trained scholars began to appear in the 1970s so we are approaching a half century of research and publication in this area. The field has generated numerous pieces of exemplary scholarship from various perspectives such as intellectual history of individual technologies, business histories of firms, economic histories of market sectors, externalist histories of funding and professionalization and so on. However, the field continues to evolve especially as computing and communication technologies have drawn together in the form of the Internet and social media and with them a new set of scholars is participating drawn not only from the history of science and technology but also from the communication and media studies fields. Powerful theories, approaches and frameworks are being increasingly drawn more widely from both the humanities and the social sciences to inform the practice of computer history. The scholars in this volume look at what has happened, what is happening now and where historical scholarship in these disciplines is headed.
