Science Fair For Nonscientists:

Science Fair for Non-Scientists Carl Tant, 1996-07 **Theories of Sustainable Development** Judith C. Enders, Moritz Remig, 2014-10-24 While sustainability has become a buzzword in discussions about the environment and development work on theories of sustainable development has received much less attention However theory is vital as understanding the origins and development of the concept is the key to achieving successful implementation of sustainability This book offers an interdisciplinary collection of research articles on the theories of sustainable development drawing on a wide range of subjects including history politics governance complex systems economics and philosophy It advocates viewing sustainable development not only as the establishment of a permanent globally practicable and future capable mode of life and economics but as a complex array of problems involving a wide range of social scientific and humanistic disciplines This innovative approach means that the book is oriented toward current problems not toward the established academic boundaries and it draws out lessons that are relevant for those studying and working in sustainability across the world This book will be of great interest to researchers and students of sustainable development and environmental politics as well as practitioners working with sustainable development in politics business administration and civil society organizations

Preparing Dinosaurs Caitlin Donahue Wylie, 2021-08-31 An investigation of the work and workers in fossil preparation labs reveals the often unacknowledged creativity and problem solving on which scientists rely Those awe inspiring dinosaur skeletons on display in museums do not spring fully assembled from the earth Technicians known as preparators have painstakingly removed the fossils from rock repaired broken bones and reconstructed missing pieces to create them These specimens are foundational evidence for paleontologists and yet the work and workers in fossil preparation labs go largely unacknowledged in publications and specimen records In this book Caitlin Wylie investigates the skilled labor of fossil preparators and argues for a new model of science that includes all research work and workers Drawing on ethnographic observations and interviews Wylie shows that the everyday work of fossil preparation requires creativity problem solving and craft She finds that preparators privilege their own skills over technology and that scientists prefer to rely on these trusted technicians rather than new technologies Wylie examines how fossil preparators decide what fossils and therefore dinosaurs look like how labor relations between interdependent yet hierarchically unequal collaborators influence scientific practice how some museums display preparators at work behind glass as if they were another exhibit and how these workers learn their skills without formal training or scientific credentials The work of preparing specimens is a crucial

component of scientific research although it leaves few written traces Wylie argues that the paleontology research community's social structure demonstrates how other sciences might incorporate non scientists into research work empowering and educating both scientists and nonscientists The Science Teacher ,1967 Some issues are accompanied by a CD ROM on a selected topic Future Earth Diana Dalbotten,Gillian Roehrig,Patrick Hamilton,2014-06-23 Earth now is dominated by both biogeophysical and anthropogenic processes as represented in these two images from a simulation of aerosols Dust red from the Sahara sweeps west across the Atlantic Ocean Sea salt blue rises into the atmosphere from winds over the North Atlantic and from a tropical cyclone in the Indian Ocean Organic and black carbon green from biomass burning is notable over the Amazon and Southeast Asia Plumes of sulfate white from fossil fuel burning are particularly prominent over northeastern North America and East Asia If present trends of dust emissions and fossil fuel burning continues in what we call the Anthropocene epoch then we could experience high atmospheric CO₂ levels leading to unusual warming rarely experienced in Earth's history This book focuses on human influences on land ocean and the atmosphere to determine if human activities are operating within or beyond the safe zones of our planet's biological chemical and physical systems Volume highlights include Assessment of civic understanding of Earth and its future Understanding the role of undergraduate geoscience research and community driven research on the Anthropocene Effective communication of science to a broader audience that would include the public the K 12 science community or populations underrepresented in the sciences Public outreach on climate education geoscience alliance and scientific reasoning Future Earth is a valuable practical guide for scientists from all disciplines including geoscientists museum curators science educators and public policy makers **The Routledge Handbook of Scientific Communication** Cristina Hanganu-Bresch,Michael J. Zerbe,Gabriel Cutrufello,Stefania M. Maci,2021-12-20 Given current science related crises facing the world such as climate change the targeting and manipulation of DNA GMO foods and vaccine denial the way in which we communicate science matters is vital for current and future generations of scientists and publics The Routledge Handbook of Scientific Communication scrutinizes what we value prioritize and grapple with in science as highlighted by the rhetorical choices of scientists students educators science gatekeepers and lay commentators Drawing on contributions from leading thinkers in the field this volume explores some of the most pressing questions in this growing field of study including How do issues such as ethics gender race shifts in the publishing landscape and English as the lingua franca of science influence scientific communication practices How have scientific genres evolved and adapted to current research and societal needs How have scientific visuals developed in response to technological advances and communication needs How is scientific communication taught to a variety of audiences Offering a critical look at the complex relationships that characterize current scientific communication practices in academia industry government and elsewhere this Handbook will be essential reading for students scholars and professionals involved in the study practice and teaching of scientific medical and technical communication Science, Nonscience, and
