Viruses are composed of a central core of genetic material (DNA or RNA) surrounded by a protein coat called a capsid. Some viruses also have an outer envelope made of lipids and proteins.

**Bacteriophages** are viruses that infect bacteria. They are composed of a head, tail, and tail fibers. The head contains the genetic material, and the tail is used to attach to and inject the genetic material into the bacterial cell. Tail fibers help the phage to recognize and bind to specific receptors on the bacterial surface.
