## Science In The New Age:

*Science and the New Age Challenge* Ernest Lucas, 1996      **Science in the New Age** David J. Hess, 1993 In *Science in the New Age* David Hess explores ideologies of the paranormal in the United States. He offers a map of the labyrinth of views put forward by parapsychologists and skeptical debunkers, spirit channelers and crystal healers, Hollywood poltergeist scripts and prophets of the New Age. Adopting a cultural perspective, Hess moves beyond the question of who is right or wrong to the cultural politics of how each group constructs its own boundaries of true and false knowledge. Hess begins by looking at each group's unique version of knowledge, science and religion, and at its story about the other groups. Comparing the various discourses, texts, writers and groups as cultures, he shows how skeptics, parapsychologists and New Agers may disagree vehemently with each other but end up sharing many rhetorical strategies, metaphors, models, values and cultural categories. Furthermore, he argues their shared paraculture has a great deal in common with the larger culture of the United States. The dialogue on the paranormal, Hess concludes, has as much to do with gender, power and cultural values as it does with spirits, extrasensory perception and crystal healing.

Dental Science in a New Age Ruth Roy Harris, 1989      **Ethnography in the Open Science and Digital Age: New Debates, Dilemmas, and Issues** Colin Jerolmack, Alexandra Murphy, Victoria Reyes, 2024-06-19 In the current moment, ethnography is caught up in a number of debates that have led ethnographers to reflect on classic methodological and ethical dilemmas in new ways. The replication crisis had led to a movement for open science, e.g., registering hypotheses in advance, sharing codes and data, but it seems unclear that recommended best practices are appropriate to ethnography. It's even up for debate whether ethnography is more of a social science or a genre. The fact that many ethnographies are widely read invites questions and criticisms from beyond the ivory tower, including our subjects about the ethics of representation, e.g., who has license to write about whom and the extent to which journalistic standards of data verification and transparency, e.g., fact checking, naming sources, should apply to qualitative research. Some ethnographers are calling for more open critical discussions about the embodied dimensions of fieldwork, including not only emotions but also issues like sexual intimacy and harassment. There's also a growing expectation that ethnographers empower our subjects to represent and analyze themselves. What's more, as more of social life is lived online, it becomes increasingly unclear where the boundaries of the field site should be drawn and whether ethnographic conventions can be applied wholesale to the study of digital spaces.

**Handbook of New Age** Daren Kemp, James R. Lewis, 2007 The *Handbook of New Age* is a comprehensive survey of alternative spiritualities, their history, their global impact, their cultural influence, and how they are understood by scholars. Chapters by many of the leading scholars of the movement give the latest analysis of contemporary spiritual trends and present up-to-date observations of the interaction between the New Age movement and many different fields of knowledge and research.

Handbook of Religion and the Authority of Science Jim R. Lewis, Olav Hammer, 2010-11-19 There has been a significant but little noticed aspect of the interface between science and religion.

namely the widespread tendency of religions to appeal to science in support of their truth claims Though the appeal to science is most evident in more recent religions like Christian Science and Scientology no major faith tradition is exempt from this pattern Members of almost every religion desire to see their truths supported by the authority of science especially in the midst of the present historical period when all of the comforting old certainties seem problematic and threatened The present collection examines this pattern in a wide variety of different religions and spiritual movements and demonstrates the many different ways in which religions appeal to the authority of science The result is a wide ranging and uniquely compelling study of how religions adapt their message to one of the major challenges presented by the contemporary world
